CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

VOL. XXIX. PARKERSBURG, W. VA., JANUARY, 1921. No. 1.

GENERAL SUMMARY.

January was much warmer and drier than usual and free from cold periods. While the average January temperatures were higher during several years, the past January was referred to in all districts as one of the most pleasant winter months of record. The precipitation was favorably distributed. The snowfall averaged about one-half the normal and the ground was bare in the agricultural districts the most of the month. Winter grains were in good condition at the close of the month. The conditions were excellent for all outdooor work.

PRESSURE.

The mean sea-level pressures at Parkersburg and Elkins were 30.21 and 30.22 inches, respectively. The highest and lowest readings observed were as follows: Parkersburg, 30.96 inches on the 18th, and 29.66 inches on the 14th. Elkins, 30.95 inches on the 12th, and 29.58 inches on the 14th.

TEMPERATURE.

The monthly mean for the State, determined from 50 stations, was 35.5°. The departure from the normal for 45 stations having ten or more years of record was +3.3°. The temperature was much above the normal from the 1st to the 9th, 20th to the 24th, and on the 29th and 30th, with the highest readings occurring generally on the 1st, 4th, and 22d. The cold periods were on the 12 13th, 18-20th and 25-26th, with the lowest temperatures occurring generally on the 13th, 18th, and 19th.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 72 per cent; 8 p. m., 67 per cent. The January averages for the same hours for the past 32 years are 83 and 77 per cent, respectively. Elkins, 8 a. m., 82 per cent; 8 p. m., 73 per cent. The January averages for Elkins for the same hours for the past 20 years are 85 and 78 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 68 stations, was 2.76 inches. The departure from the normal for 46 stations having ten or more years of record was −0.99 inch. The precipitation was heaviest over the central and northern counties and lightest over the eastern panhandle. Rain or snow occurred in most districts on the 1st-2d, 7-8th, 12-15th, 21st-23d, and 29th-31st, the greatest amounts being recorded on the 8th, 14th, 22d, and 30th. Light snow or snow flurries occurred on the 6th and 9th, light to moderate snow from the 11th to the 14th, moderate snow over the southeast counties on the 25-26th, and light snow or snow flurries on the 31st.

WIND.

The average wind velocity at Parkersburg was 6.3 miles per hour, or 0.3 mile below the January average for 31 years. The average at Elkins was 6.5 miles per hour, or 1.4 miles above the January average for 21 years. The highest velocity at Parkersburg was 36 miles per hour from the west on the 2d, and at Elkins 33 miles per hour from the west on the 16th.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 40 per cent of the possible amount, or 12 per cent above the January average for 23 years. The average at Elkins was 37 per cent, or 8 per cent above the January average for 20 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Bancroft, 29th; Bruceton Mills, 7th, 14th, 22d, and 30th; Cairo, 11th; Fairmont, 28th; Gary, 22d; Hinton, 11th, 22d, and 28th; Logan, 15th; Pickens, 31st; Smithfield, 30th and 31st; Wheeling, 3d, 4th, 9th, 10th, 11th, 13th, 24th, 27th, and 28th; Williamson, 1st, 7th, 11th, 13th, 19th, 20th, 22d, 28th, and 29th.

Halos, lunar: Elkins, 18th; Wheeling, 24th.

Halo, solar: Ryan, 29th.

Sleet: Lost Creek, Smithfield, and Wheeling, 5th; Camden-on-Gauley, Elkins, Huntington, Miller, Parkersburg, and Smithfield, 13th; Bancroft, Brandywine, Burlington, Cairo, Charleston, Evans, Logan, Marlinton, Moorefield, Pickens, Romney, and Wheeling, 14th; Romney, 21st.

Thunderstorms: Lewisburg and Marlinton, 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

§ Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

UNIVERSITY OF ILLINOIS LIBRARY

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXIX. Parkersburg, W. Va., February, 1921. No. 2.

GENERAL SUMMARY.

February, like December and January, was nearly continuously seasonably warm and pleasant, completing one of the warmest and most favorable winters of State record. The precipitation was considerably below the normal and well distributed throughout the month and over the State. The snowfall, however, was slightly above the normal, due to a moderately heavy snowstorm at the beginning of the last decade. The conditions were excellent for river traffic and all outdoor work. The few days of cool weather during the last decade retarded the development of fruit buds, which were advancing rapidly during the second decade. Considerable plowing was done during the month.

PRESSURE.

The mean sea-level pressures at Parkersburg and Elkins were 30.09 and 30.10 inches, respectively. The highest and lowest readings observed were as follows: Parkersburg, 30.66 inches on the 18th, and 29.46 inches on the 10th. Elkins, 30.64 inches on the 18th, and 29.46 inches on the 10th.

TEMPERATURE.

The monthly mean for the State, determined from 51 stations, was 37.4°. The departure from the normal for 46 stations having ten or more years of record was +5.5°. The month opened with normal temperature, but seasonably warm weather set in on the 3d and continued until the 17th. The last ten days were somewhat cooler than usual, except the 22-23d and 27-28th. The highest temperatures, near the February State record, occurred on the 16th, while the lowest readings were general on the 21st, with a range mostly from 15° above to 10° below zero.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 76 per cent; 8 p. m., 74 per cent. The February averages for the same hours for the past 32 years are 82 and 76 per cent, respectively. Elkins, 8 a. m., 86 per cent; 8 p. m., 73 per cent. The February averages for Elkins for the same hours for the past 20 years are 84 and 74 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 71 stations, was 2.61 inches. The departure from the normal for 49 stations having ten or more years of record was −0.45 inch. The precipitation was heaviest over the central counties and lightest over the eastern panhandle section. Most of the precipitation was received on the 5-6th, 8-11th, 19-20th, and 23d-24th, with greatest amounts on the 9th and 20th. Light snow fell on the 1st-2d and in sections on the 11-12th. Moderately heavy snow, ranging generally from 3 to 20 inches, fell on the 19-20th. Light snow also fell in the northern mountain districts on the 28th.

WIND.

The average wind velocity at Parkersburg was 6.3 miles per hour, or 1.0 mile below the February average for 31 years. The average at Elkins was 6.1 miles per hour, or 0.6 mile above the February average for 22 years. The highest velocity at Parkersburg was 32 miles per hour from the northwest on the 17th, and at Elkins 30 miles per hour from the southwest on the 11th.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 40 per cent of the possible amount, or 4 per cent above the February average for 23 years. The average at Elkins was 33 per cent, or 2 per cent below the February average for 21 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Bruceton Mills, 8th, 22d, and 28th; Davis, 28th; Elkins, 10th; Fairmont, 4th; Hinton, 14th; Logan, 7th; Pickins, 22d and 28th; Rowlesburg, 10th and 28th; Stony River Dam, 1st, 2d, 6th, 8th, 10th, 22d, and 28th; Terra Alta, 9th and 28th; Wellsburg, 7th; Wheeling, 5th, 7th, and 19th; Williamson, 6th, 7th, 8th, 14th, 15th, 21st, 26th, and 27th.

Hail: Parkersburg, 10th; Smithfield, 11th.

Halos, lunar: Bayard, 18th; Elkins, 18th; Parkersburg, 13th and 18th; Ryan, 19th.

Sleet: Bluefield, 19th; Burlington, 1st; Cairo, 2d; Smithfield, 11th; Wheeling, 10th.

Thunderstorms: (dates and number of stations reporting:) 8th, 4; 9th, 15; 10th, 3; 11th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for February, 1921.

---

§ Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

VOL. XXIX. PARKERSBURG, W. VA., OCTOBER, 1921. No. 10.

GENERAL SUMMARY.

The month averaged slightly cooler and somewhat drier than usual and the rainfall was unfavorably distributed. Over the central and southern counties the precipitation was near the normal and ample, while the amounts received over the two panhandle sections and west-central counties were much deficient. Then nearly one-half of the month's rainfall was received on the 30th-31st. The first half of the month was cool. While scattered light frosts occurred on the 1st, 2d, and 7th, growth continued until the 13th and 14th, when there were killing frosts. Not much damage resulted, however, owing to the lateness of the season. The conditions were excellent for drying and husking corn. The germination and growth of wheat was somewhat retarded by dry weather. At the close of the month corn was exceptionally dry for the season.

PRESSURE.

The mean sea-level pressure at Parkersburg and Elkins was 30.05 and 30.08 inches, respectively. The highest and lowest readings observed were as follows: Parkersburg, 30.57 inches on the 14th, and 29.64 inches on the 31st. Elkins, 30.63 inches on the 14th, and 29.65 inches on the 31st.

TEMPERATURE.

The monthly mean for the State, determined from 49 stations, was 53.7°. The departure from the normal for 45 stations having ten or more years of record was −1.4°. The first fifteen days were cooler than usual, except the 2d, 7th, and 10-11th, and heavy to killing frosts, with temperature slightly below freezing, occurred on the 13th and 14th. After the 16th the temperature was continuously above the normal, except the 20th-21st, with the highest readings occurring generally on the 24th.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 80 per cent; 8 p. m., 67 per cent. The October averages for the same hours for the past 33 years are 83 and 70 per cent, respectively. Elkins, 8 a. m., 90 per cent; 8 p. m., 76 per cent. The October averages for Elkins for the same hours for the past 21 years are 89 and 78 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 70 stations, was 2.48 inches. The departure from the normal for 49 stations having ten or more years of record was −0.36 inch. Practically all the rainfall was received on the 3-4th, 8th, 12th, 19-20th, and 30th-31st, with the greatest amounts on the 3d and 30th-31st. There were scattered snow flurries on the 4th, 6th, 8th, 9th, and 12th, measureable amounts being received at a few of the more elevated stations on the 12th.

WIND.

The average wind velocity at Parkersburg was 5.4 miles per hour, or 0.5 mile above the October average for 31 years. The average at Elkins was 5.3 miles per hour, or 1.9 miles above the October average for 22 years. The highest velocity at Parkersburg was 29 miles per hour from the northwest on the 7th, and at Elkins 25 miles per hour from the west on the 7th.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 69 per cent of the possible amount, or 19 per cent above the October average for 24 years. The average at Elkins was 61 per cent, or 14 per cent above the October average for 22 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Bluefield, 1st: Cairo, 2d, 5th, 6th, 7th, 10th, and 11th; Charleston, 11th; Elkins, 2d, 7th, 14th, 15th, 16th, 17th, 19th, and 24th; Glenville, 19th; Grafton, 1st, 6th, 7th, and 22d; Hinton, 6th, 7th, 10th, 16th, aud 22d; Huntington, 19th and 31st; Mannington, 1st, 11th, and 24th; Moundsville, 16th, 17th, 22d, 23d, 24th, and 29th; New Cumberland, 11th, 15th, and 29th; Parkersburg, 11th, Romney, 7th, 16th, 17th, and 18th; Terra Alta 14th 15th, and 16th; Weston, 1st, 11th, and 19th; Wheeling, 11th, 14th, 15th, 16th, 17th, 23d, 24th, 25th, 28th, and 29th; Williamson, 17th, 18th, 19th, 23d, 24th, and 25th.

Hail: Bruceton Mills, 4th; Stony River Dam, 20th; Weston, 8th.

Sleet: Evans, 12th; Parkersburg, 12th; Smithfield, 4th, 8th, and 12th; Wheeling, 8th.

Smoke, dense: Lost Creek, 24th, 25th, and 26th.

Thunderstorms: Lewisburg and Mannington, 31st; Smithfield, 30th and 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters a, b, c appearing in the table indicate number of days missing; for example, b represents two days, etc.

Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for October, 1921.

CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXIX. Parkersburg, W. Va., March, 1921. No. 3.

GENERAL SUMMARY.

The month was exceptionally warm, the average temperature being 1.4° higher than for the previovs warmest March of State record and 10.0 above the March normal. From the 1st to the 28th the temperatures were nearly continously above the normal and the conditions were exceptionally favorable for farm work, which advanced rapidly. Peach, pear, plum, and cherry trees were in bloom during the last decade. Freezing temperatures were general on the 28th, causing great damage to fruit buds and bloom. The rainfall averaged considerably below the normal and was favorably distributed. The snowfall was unimportant, only traces being received in the agriculture districts. The sunshine was much above the normal. The rivers were only at moderate stages. Wheat was in good condition at the close of the month.

PRESSURE.

The mean sea-level pressures at Parkersburg and Elkins were 30.13 and 30.14 inches, respectively. The highest and lowest readings observed were as follows: Parkersburg, 30.65 inches on the 22d, and 29.70 inches on the 9th. Elkins, 30.61 inches on the 22d, and 29.80 inches on the 24th

TEMPERATURE.

The monthly mean for the State, determined from 47 stations, was 52.7°. The departure from the normal for 41 stations having ten or more years of record was +10.0°. The month opened warm and the temperatures were also much above the normal from the 5th to the 9th, 11th to the 21st, and the 23d to the 28th, with the highest readings occurring generally on the 20th, 21st, and 27th. The temperatures were nearly normal on 4th, 10th, and 22d. Much colder weather set in on the 28th and the morning readings on the 29th ranged generally from 20° to 25°. The month closed with the temperature about normal.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 72 per cent; 8 p. m., 61 per cent. The March averages for the same hours for the past 32 years are 79 and 69 per cent, respectively. Elkins, 8 a. m., 76 per cent; 8 p. m., 63 per cent. The March averages for Elkins for the same hours for the past 21 years are 82 and 69 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 67 stations, was 2.84 inches. The departure from the normal for 46 stations having ten or more years of record was −0.87 inch. The greater part of the precipitation was received on the 2-3d, 6-7th, 9-10th, 12-13th, 15-18th, 21st-22d, 24-25th, 28-29th, and 30th, the greatest amounts being recorded on the 3d, 9th, 15-16th, and 24-25th. Snow flurries occurred at a few stations on the 2-3d, and at Davis on the 10th, but in the greater part of the State no snow fell until the 28th and measurable amounts were recorded at only three stations–Davis, Pickens, and Terra Alta.

WIND.

The average wind velocitv at Parkersburg was 6.7 miles per hour, or 0.6 mile below the March average for 31 years The average at Elkins was 6.4 miles per hour, or 0.8 mile above the March average for 22 years. The highest velocity at Parkersburg was 30 miles per hour from the northwest on the 16th, and at Elkins 34 miles per hour from the northwest on the 21st.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 57 per cent of the possible amount, or 16 per cent above the March average for 23 years. The average at Elkins was 50 per cent, or 12 per cent above the March average for 22 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Cairo, 15; Creston 10th, 14th, and 15th; Elkins, 14th; Evans, 10th and 14th; Hinton, 1st and 25th; Huntington, 10th; Mannington, 14th; Moundsville, 14th and 15th; New Cumberland, 14th and 15th; Parkersburg, 15th; Pickens, 9th; Robertsburg, 10th and 14th; St. Marys, 10th, 14th, and 15th; Smithfield, 17th; Wheeling, 8th, 11th, 12th, 14th, 15th, 17th, 19th, and 20th; Williamson, 1st, 2d, and 14th.

Hail: Bancroft, 24th; Bayard, 3d and 14th; Bens Run, 16th; Creston, 17th; Elkins, 3; Glenville, 17th; New Cumberland, 19th; Rowlesburg, 3d, Terra Alta, 3d; Weston, 12th.

Halos, lunar: Elkins, 16th and 20th; Wheeling, 18th and 20th.

Halo, solar: Ryan, 14th.

Sleet: New Cumberland, Parkersburg, and Smithfield, 28th.

Thunderstorms: (dates and number of stations reporting:) 2d, 3; 3d, 2; 7th, 1; 9th, 1; 12th, 1; 13th, 1; 14th, 4; 15th, 2; 16th, 12; 17th, 12; 18th, 3; 19th, 3; 24th, 6; 26th, 2.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for March, 1921.

§ Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

UNWE

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

VOL. XXIX. PARKERSBURG, W. VA., APRIL, 1921. No. 4.

GENERAL SUMMARY.

April was an exceptionally pleasant month. The average temperature for the State, 55.8°, was the highest of April record, except in 1896, the rainfall was much below the normal and well distributed, the snowfall in the agricultural districts was unimportant, and more sunshine was received than during any other April of record. However, owing to unseasonably warm weather during February and March, which developed fruit buds and bloom, the cold period on the 11-12th caused great damage to peaches, pears, plums, and cherries, and much damage to apples. Farm work advanced rapidly and many fields were seeded with oats, potato planting was well advanced, and the ground was being prepared for corn at the close of the month. While wheat was looking good it was somewhat yellow from low temperatures.

PRESSURE.

The mean sea-level pressures at Parkersburg and Elkins were 30.07 and 30.08 inches, respectively. The highest and lowest readings observed were as follows: Parkersburg, 30.49 inches on the 11th, and 29.54 inches on the 23d. Elkins, 30.42 inches on the 4th, and 29.51 inches on the 23d

TEMPERATURE.

The monthly mean for the State, determined from 49 stations, was 55.8°. The departure from the normal for 44 stations having ten or more years of record was +4.2°. The month opened slightly cool, but abnormally warm weather prevailed from the 2d to the 9th. The temperatures were also much above the normal from the 13th to the 18th and the 21st to the 28th with the highest readings occurring generally on the 25th and 26th. Cool weather prevailed on the 10-12th, 18-19th, and 30th, with the lowest temperatures occurring generally on the 11th and 12th.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 70 per cent; 8 p. m., 56 per cent. The April averages for the same hours for the past 32 years are 75 and 62 per cent, respectively. Elkins, 8 a. m., 80 per cent; 8 p. m., 62 per cent. The April averages for Elkins for the same hours for the past 21 years are 80 and 64 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 69 stations, was 2.50 inches. The departure from the normal for 48 stations having ten or more years of record was −1.00 inch. The rainfall was lightest over the eastern panhandle section and the heaviest rain was at Green Sulphur Springs, Summers County, where there was an excessive 24-hour rainfall of 3.50 inches on the 27th. Most of the rainfall was received on the 1st, 9th, 15-18th, 23d, and 27-30th, with the greatest amounts on the 9th, 17th, 27th and 29th. Traces of snow were received in many localities on the 1st, 10th, and 11th, and in a few localities on the 15th, 17th, and 18h. At several stations measurable amounts were recorded on the 1st, 10th, and 18th.

WIND.

The average wind velocity at Parkersburg was 5.9 miles per hour, or 0.9 mile below the April average for 31 years The average at Elkins was 5.8 miles per hour, or 0.8 mile above the April average for 21 years. The highest velocity at Parkersburg was 32 miles per hour from the northwest on the 17th, and at Elkins 27 miles per hour from the northwest on the 17th.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 65 per cent of the possible amount, or 18 per cent above the April average for 23 years. The average at Elkins was 49 per cent, or 5 per cent above the April average for 22 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Cairo, 28th; Creston, 28th and 29th; Hinton, 2d; Mannington, 28th; Moundsville, 2d; Stony River Dam, 8th and 27th.

Hail: Bancroft and Charleston, 10th; Cairo, Elizabeth, Terra Alta, and Wheeling, 29th.

Halos, lunar: Parkersburg, 20th; Pickens, 15th.

Halo, solar: Elkins, 21st.

Winds, high: Cairo and Elkins, 17th; Green Sulphur Springs, 22d; Parkersburg, 9th and 17th; Pickins, 14th; Terra Alta, 7th; Wardensville, 1st, 2d, 3d, 9th, 10th, 11th, 12th, and 18th; Weston, 14th, 17th, 22d, and 29th.

Thunderstorms: (dates and number of stations reporting:) 9th, 2; 17th, 1; 26th, 5; 27th, 9; 28th, 6; 29th, 8.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, [a], [b], [c] appearing in the table indicate number of days missing; for example, [b] represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for April, 1921.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXIX. Parkersburg, W. Va., May, 1921. No. 5.

GENERAL SUMMARY.

While May averaged only somewhat cooler than usual, the month was characterized by nearly continuously cool weather until the 20th and by moderately warm weather during the last decade. Temperatures near freezing or slightly below occurred in many localities on the 1st, 9th, and 17th, causing considerable damage to wheat and fruit. The rainfall averaged considerably above the normal and was well distributed throughout the month but somewhat unfavorably distributed over the State, heavy and washing rains having occurred in the eastern counties. Hail also caused considerable damage in a few localities. Farm work was delayed during the first and second decades but at the end of the month planting was nearly normally advanced. All crops, except fruit, were in fair to good condition on June 1.

PRESSURE.

The mean sea-level pressures at Parkersburg and Elkins were 30.03 and 30.02 inches, respectively. The highest and lowest readings observed were as follows: Parkersburg, 30.36 inches on the 21st, and 29.79 inches on the 11th. Elkins, 30.36 inches on the 21st, and 29.78 inches on the 5th

TEMPERATURE.

The monthly mean for the State, determined from 51 stations, was 61.4°. The departure from the normal for 45 stations having ten or more years of record was −0.7°. Cool weather prevailed until the 20th, except the 11-13th, with lowest temperatures general on the 1st, 9th, and 17th, when the morning readings ranged mostly from 30° to 36°. Continuously moderately warm weather prevailed during the last decade, with the highest temperatures occurring generally on the 19th, 23d, 27th, and 28th.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 76 per cent; 8 p. m., 66 per cent. The May averages for the same hours for the past 31 years are 75 and 64 per cent, respectively. Elkins, 8 a. m., 82 per cent; 8 p. m., 66 per cent. The May averages for Elkins for the same hours for the past 21 years are 79 and 65 per cent, respectively.

PRECIPITATION.

The monthly mean for the State, determined from 70 stations, was 4.48 inches. The departure from the normal for 49 stations having ten or more years of record was +0.45 inch. The rainfall was heaviest over the eastern counties, where crops were damaged in sections by washing, and lightest over the western and southern counties. There were four well-marked periods of rainfall, as follows: From the 3d to the 6th, 11th to the 13th, 23d to the 25th, and the 30th, the greatest amounts being received on the 3d-4th, 11-12th, 24-25th, and 28-29th There were also scattered light rains on the 1st, 7th, 22d, and 26th. Traces of snow were received at Terra Alta and Davis on the 1st.

HAIL.

Light hail fell in portions of Mercer County on the 12th, Preston County on the 24th, and Webster County on the 29th. Heavy hail, causing some damage to crops, fell on the 23d in the eastern portion of Jefferson County and in sections of Ohio Marion, and Tucker counties on the 24th.

WIND.

The average wind velocity at Parkersburg was 4.7 miles per hour, or 0.6 mile below the May average for 31 years The average at Elkins was 4.5 miles per hour, or 1.3 miles above the May average for 20 years. The highest velocity at Parkersburg was 34 miles per hour from the northwest on the 13th, and at Elkins 27 miles per hour from the northwest on the 13th.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 61 per cent of the possible amount, or 7 per cent above the May average for 23 years. The average at Elkins was 47 per cent, or 7 per cent below the May average for 21 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Cairo, 14th, 18th, 26th, and 27th; Creston, 10th, 14th, 26th, and 31st; Elkins, 7th and 8th; Glenville, 7th; Grafton, 7th and 8th; Hinton, 7th, 13th, 18th, and 22d; Mannington, 8th, 9th, 10th, 14th, 17th, 18th, and 26th; Marlinton, 8th, 18th, 19th, 20th, 21st, 22d, and 31st; New Cumberland, 7th, 10th, 17th, 20th, 21st, and 31st; Rowlesburg, 7th, 8th, and 14th; Smithfield, 7th, 8th, 9th, 10th, and 15th; Weston, 8th, 14th, and 26th; Wheeling, 6th.

Halos, solar: Elkins, 15th; Terra Alta, 16th; Wellsburg, 13th.

Thunderstorms: (dates and number of stations reporting:) 7th, 2; 11th, 6; 12, 9; 13th, 7; 21st, 1; 23d, 15; 24th, 12; 25th, 19; 26th, 4; 27th, 3; 28th, 11; 29th, 10; 30th, 2.

An aurora was observed generally throughout the State on the night of the 14-15th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, ᵃ, ᵇ, ᶜ appearing in the table indicate number of days missing; for example, ᵇ represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for May, 1921.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

VOL. XXIX. PARKERSBURG, W. VA., JUNE, 1921. No. 6.

GENERAL SUMMARY.

June was much warmer and considerably drier than usual, with the rainfall unfavorably distributed throughout the month and over the State. With the exception of two or three short periods, the temperatures were continuously above the normal, but the highest readings were generally well within previous June records. The conditions in many sections were decidedly droughty until near the end of the second decade, causing considerable damage to crops, especially potatoes, oats, and meadows. Torrential rains, attending an electrical storm, fell during the 18th and night of 18-19th over the western portions of Wetzel and Tyler counties and the northern portion of Doddridge County, causing much damage to crops, roads, and oil interests. Many houses were also flooded and several houses were washed from their foundations. No lives were lost. At the close of the month wheat was being harvested, with fair yield, and corn was making rapid growth.

PRESSURE.

The mean sea-level pressures at Parkersburg and Elkins were 30.02 and 30.01 inches, respectively. The highest and lowest readings observed were as follows: Parkersburg, 30.30 inches on the 5th, and 29.74 inches on the 28th. Elkins, 30.32 inches on the 6th, and 29.71 inches on the 28th

TEMPERATURE.

The monthly mean for the State, determined from 51 stations, was 72.4°. The departure from the normal from 45 stations having ten or more years of record was +3.2°. The temperature was continuously above the normal, except from the 4th to the 8th and the 14th to the 17th, with the highest readings occurring generally on the 25th. The lowest readings occurred in most districts on the 6th.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 72 per cent; 8 p. m., 64 per cent. The June averages for the same hours for the past 31 years are 78 and 68 per cent, respectively. Elkins, 8 a. m., 86 per cent; 8 p. m., 77 per cent. The June averages for Elkins for the same hours for the past 21 years are 84 and 74 per cent, respectively.

PRECIPITATION.

The monthly mean for the State, determined from 71 stations, was 4.01 inches. The departure from the normal for 50 stations having ten or more years of record was —0.44 inch. The rainfall was heaviest over the central and northwest-central counties and lightest over the eastern counties. Showers occurred in the central counties on the 4th, in the southern counties on the 8th, 9th, and 10th, and in most districts on the 11th, 12th, 13th, 14th, and 17-19th. Showers also fell daily in many districts from the 22d to the close of the month. The heaviest rainfall was recorded on the 18-19th, 23d, and 29th.

HAIL.

Light hail fell at Ryan on the 18th and at Smithfield on the 26th.

WIND.

The average wind velocity at Parkersburg was 4.2 miles per hour, or 0.4 mile below the June average for 31 years The average at Elkins was 3.4 miles per hour, or 0.1 mile above the June average for 22 years. The highest velocity at Parkersburg was 30 miles per hour from the west on the 26th, and at Elkins 34 miles per hour from the northwest on the 17th.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 73 per cent of the possible amount, or 15 per cent above the June average for 23 years. The average at Elkins was 56 per cent, or 4 per cent below the June average for 22 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Brandywine, 30th; Cairo, 20th, 24th, and 27th; Creston, 1st and 13th; Davis, 12th; Elkins, 12th, 13th, 20th, 25th, and 26th; Glenville, 12th; Grafton, 13th: Hinton, 20th; Mannington, 1st, 6th, 9th, 10th, 13th, 14th, 15th, 21st, 24th, 25th, and 30th; Marlinton, 6th, 10th, 24th, 27th, 28th, and 30th; Moundsville, 10th and 21st; New Cumberland, 9th, 10th, 15th, and 24th; Pickens, 4th; Romney, 7th, 8th, 9th, 10th, 11th. and 20th; Rowlesburg, 4th and 9th; St. Marys, 20th; Terra Alta, 4th; Weston, 20th; Wheeling, 9th.

Halos, lunar: Pickens, 14th; Wheeling, 10th, 19th, and 21st.

Thunderstorms (dates and number of stations reporting): 1st, 1; 3d, 7; 4th, 5; 11, 8; 13th, 10; 14th, 4; 17th, 14; 18th, 16; 19th, 4; 22d, 6; 23d, 3; 24th, 6; 25th, 10; 26th, 8; 27th, 5; 28th, 10; 29th, 12; 30th, 7.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, a, b, c appearing in the table indicate number of days missing; for example, b represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for June, 1921.

NWE

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXIX. Parkersburg, W. Va., July, 1921. No. 7.

GENERAL SUMMARY.

July was characterized by warm, sunshiny, and dry weather. With one exception, it was the warmest July of State record and the sunshine received was much above the normal. In fact, for the greater part of the State, the July record for sunshine was broken. The month was nearly continuously warm, the night temperatures being especially high. The rainfall was fairly well distributed, although the conditions were droughty during the week ending on the 29th. As the late winter and early spring months were warm, with also high temperatures in June and July, crops of all kinds were from two to three weeks in advance of the normal at the close of the month. Wheat and oats were harvested, many fields of potatoes marketed, and haying completed. Corn made rapid growth and was generally in good to excellent condition, although somewhat damaged in sections by the dry weather during the last decade. Brisk to high winds during rain squalls also caused some damage to corn.

PRESSURE.

The mean sea-level pressure at Parkersburg and Elkins was 30.03 inches. The highest and lowest readings observed were as follows: Parkersburg, 30.29 inches on the 25th, and 29.80 inches on the 30th. Elkins, 30.29 inches on the 25th, and 29.77 inches on the 30th.

TEMPERATURE.

The monthly mean for the State, determined from 49 stations, was 75.6°. The departure from the normal from 45 stations having ten or more years of record was +2.6°. The temperatures were continuously above the normal during the first fifteen days, on the 18-19th, and from the 25th to the end of the month, with the highest readings occurring generally on the 4th and 8th. The coolest weather prevailed on the 16-17th and from the 20th to the 25th, when the temperatures were practically normal or slightly below.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 79 per cent; 8 p. m., 66 per cent. The July averages for the same hours for the past 33 years are 79 and 67 per cent, respectively. Elkins, 8 a. m., 90 per cent; 8 p. m., 79 per cent. The July averages for Elkins for the same hours for the past 21 years are 87 and 78 per cent, respectively.

PRECIPITATION.

The monthly mean for the State, determined from 69 stations, was 3.58 inches. The departure from the normal for 50 stations having ten or more years of record was —1.17 inches. The rainfall was heaviest over the eastern counties and lightest over the western and northern. Favorable showers occurred daily in most districts from the 8th to the 16th and on the 19-20th and 29-30th, the greatest rainfall being received on the 9th, 15th, 19-20th, and 29-30th.

HAIL.

Light hail fell in sections of Hancock, Mineral, and Randolph counties on the 8th. Moderately heavy hail, causing slight damage to tender vegetation, also fell locally at Piedmont on the 8th. The hail stones were disk-shaped and ranged from one to three inches in circumference.

WIND.

The average wind velocity at Parkersburg was 3.9 miles per hour, or 0.6 mile below the July average for 31 years The average at Elkins was 3.2 miles per hour, or 0.2 mile above the July average for 22 years. The highest velocity at Parkersburg was 26 miles per hour from the northwest on the 8th, and at Elkins 24 miles per hour from the southwest on the 19th.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 78 per cent of the possible amount, or 17 per cent above the July average for 24 years. The average at Elkins was 60 per cent, or 6 per cent above the July average for 21 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Burlington, 12th; Cairo, 16th and 27th; Elkins, 2d, 3d, 6th, 7th, 11th, 12th, 14th, 18th, 24th, and 25th; Glenville, 2; Hinton, 4th, 18th, 22d, 23d, 28th, and 31st; Mannington, 1st, 2d, 4th, 5th, 6th, 7th, 11th, 14th, 21st, 22d, 23d, 24th, 26th, and 30th; Marlinton, 1st, 2d, 3d, 4th, 6th, 7th, 13th, 15th, 16th, 17th, 18th, 20th, 21st, 22d, 23d, 24th, 25th, 26th, 27th, 28th, 30th, and 31st; Moundsville, 1st, 2d, 3d, 4th, and 5th; New Cumberland, 2d, 3d, and 7th; Parkersburg, 2d; Rowlesburg, 1st, 5th, 21st, and 22d; Smithfield, 6th and 7th; Terra Alta, 1st, 2d, 7th, 8th, 11th, 14th, and 16th; Weston, 1st, 2d, 7th, 21st, and 22d.

Thunderstorms (dates and number of stations reporting): 1st 3; 5th, 3; 6th, 1; 7th, 3; 8th, 17; 9th, 13; 10th, 4; 11th, 7; 12th, 9; 13th, 11; 14th, 3; 15th, 6; 16th, 2; 18th, 1; 19th, 4; 20th, 2; 21st, 1; 25th, 7; 27th, 2; 28th, 4; 29th, 12; 30th, 4.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for July, 1921.

CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXIX. Parkersburg, W. Va., August, 1921. No. 8.

GENERAL SUMMARY.

August was considerably cooler and wetter than usual and free from high temperature periods. The month closed warm, however. In a few of the more elevated localities the temperature was near the frost line on two or three mornings. The rainfall was unfavorably distributed. About one-half of the month's precipitation was received on the 2-3d, while the conditions were droughty during the last decade, causing slight injury to corn and pastures The weather was generally favorable for haying, harvesting, and thrashing. At the close of the month corn was in good condition and ripening rapidly, haying nearly completed, and thrashing well advanced.

PRESSURE.

The mean sea-level pressure at Parkersburg and Elkins was 30.10 inches. The highest and lowest readings observed were as follows: Parkersburg, 30.31 inches on the 15th, and 29.80 inches on the 17th. Elkins, 30.29 inches on the 28th, and 29.76 inches on the 17th.

TEMPERATURE.

The monthly mean for the State, determined from 48 stations, was 69.7°. The departure from the normal from 43 stations having ten or more years of record was —2.0°. The temperature was generally slightly above the normal on the 2d, 11-13th, 17-18th, and 25-26th, and considerably above during the last three days, with the highest readings occurring generally on the 30th. Cool weather prevailed from the 3d to the 11th, 14th to the 16th, and 21st to the 24th, with the lowest temperatures occurring generally on the 15th and 22d. The morning temperatures were also considerably below normal on the 27th and 28th.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 80 per cent; 8 p. m., 68 per cent. The August averages for the same hours for the past 33 years are 81 and 72 per cent, respectively. Elkins, 8 a. m., 89 per cent; 8 p. m., 79 per cent. The August averages for Elkins for the same hours for the past 21 years are 90 and 81 per cent, respectively.

PRECIPITATION.

The monthly mean for the State, determined from 65 stations, was 5.20 inches. The departure from the normal for 47 stations having ten or more years of record was +1.39 inches. Most of the rainfall was received on the 2-3d, 6-7th 12th, 14th, 17th, and 21st, the amounts on the 2-3d being generally heavy to excessive. Light showers also occurred in many localities on the 4th, 6th, 13th, 18-19th, 25-26th, and 31st. The rainfall was heaviest over the central counties and lightest over the southeastern and west-central districts.

HAIL.

Light hail fell in sections of Preston County on the 2d and Webster County on the 17th.

WIND.

The average wind velocity at Parkersburg was 4.2 miles per hour, or normal as compared with the August average for 31 years. The average at Elkins was 3.8 miles per hour, or 1.0 mile above the August average for 22 years. The highest velocity at Parkersburg was 22 miles per hour from the northwest on the 2d, and at Elkins 23 miles per hour from the northwest on the 2d.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 73 per cent of the possible amount, or 17 per cent above the August average for 24 years. The average at Elkins was 53 per cent, or 2 per cent below the August average for 22 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Bluefield, 9th, and 19th; Cairo, 1st, 4th, 8th, 9th, 13th, and 19th; Elkins, 1st, 10th, 15th, 19th, 22d, 24th, and 28th; Hinton, 19th, 25th, 27th, and 30th; Mannington, 1st, 4th, 8th, 15th, 19th, 22d, 24th, and 28th; Marlinton, 1st, 4th, 9th, 10th, 15th, 18th, 19th, 22d, and 24th to 30th, inclusive; New Cumberland, 24th; Parkersburg, 4th; Pickens, 3d; Robertsburg, 4th; Smithfield, 25th, 26th, 27th, and 28th; Terra Alta, 3d, 4th, 24th, 28th, and 29th; Weston, 4th, 9th, 15th, 19th, 22d, 24th, and 28th; Wheeling, 4th, 9th, 11th, 19th, and 24th,

Halo, solar: Terra Alta, 20th.

Thunderstorms (dates and number of stations reporting): 1st, 1; 2d, 15; 3d, 11; 5th, 1; 6th, 7; 7th, 8; 8th, 1; 11th, 3; 12th, 3; 13th, 3; 14th, 2; 16th, 1; 17th, 12; 18th, 2; 20th, 6; 24th, 1; 25th, 2; 26th, 1; 29th, 1; 31st, 9.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, [a], [b], [c] appearing in the table indicate number of days missing; for example, [b] represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for August, 1921.

CHARLES F. MARVIN, Chief.

UNIVERSITY OF ILLINOIS L
NOV 9 1921

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXIX. Parkersburg, W. Va., September, 1921. No. 9.

GENERAL SUMMARY.

The past month was the wettest September of State record and also the warmest, except in 1900. The temperature was continuously above the normal, except the 26th, probably breaking all monthly State temperature records. The lowest temperature recorded was only 39°, the record for September. In 1906, however, the lowest for September was 38°. The average temperatures for Elkins and Parkersburg were the highest of September record. There were no frosts. The rainfall was so favorably distributed that there was no damage from flooding and washing, although farm work was somewhat delayed by wet weather. High wind in the central portion of Jackson County on the 17th caused considerable damage to telephone wires and roofs. High wind on the 30th, attending a change to much cooler weather, also caused some damage to roofs and wires over the northern portion of the State. At the close of the month corn was mostly cut, wheat and rye thrashed, and the ground ready for wheat seeding.

PRESSURE.

The mean sea-level pressure at Parkersburg and Elkins was 30.06 inches. The highest and lowest readings observed were as follows: Parkersburg, 30.32 inches on the 19th, and 29.73 inches on the 30th. Elkins, 30.33 inches on the 19th, and 29.73 inches on the 30th.

TEMPERATURE.

The monthly mean for the State, determined from 49 stations, was 70.9°. The departure for 44 stations having ten or more years of record was +5.1°. While the temperature was above the normal for the entire month, except the 26th, the warmest weather occurred on the 1st-2d, 4-6th, 10-11th, 15-17th, and 20th-21st. The highest temperatures were generally recorded on the 1st, 2d, and 17th.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 86 per cent; 8 p. m., 77 per cent. The September averages for the same hours for the past 33 years are 84 and 71 per cent, respectively. Elkins, 8 a. m., 93 per cent; 8 p. m., 89 per cent. The September averages for Elkins for the same hours for the past 20 years are 92 and 83 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 68 stations, was 4.76 inches. The departure from the normal for 46 stations having ten or more years of record was +1.99 inches. Most of the rainfall was received from the 3d to the 6th, 9th to the 11th, 18th to the 21st, 25th to the 27th, and on the 30th, the greatest amounts being recorded on the 6th and 21st.

WIND.

The average wind velocity at Parkersburg was 3.9 miles per hour, or 0.4 mile below the September average for 31 years. The average at Elkins was 3.1 miles per hour, or 0.3 mile above the September average for 22 years. The highest velocity at Parkersburg was 44 miles per hour from the northwest on the 30th, and at Elkins 34 miles per hour from the west on the 30th.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 64 per cent of the possible amount, or 6 per cent above the September average for 24 years. The average at Elkins was 56 per cent, or 3 per cent above the September average for 22 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Bluefield, 12th; Creston, 2d, 7th, 8th, 9th, 12th, 13th, 14th, 15th, 16th, 17th, 19th, 26th, and 28th; Elkins, 2d, 12th, 13th, 14th, 16th, 24th, 28th, and 29th; Grafton, 16th, and 24th; Hinton, 1st, 2d, 13th, 16th, 20th, and 29th; Lewisburg, 16th; Mannington, 2d, 7th, 13th, 14th, 15th, 16th, 19th, 20th, 24th, and 26th; Marlinton, 4th, 6th, 7th, 12th, 14th, 16th, 17th, 19th, 22d, 24th, and 29th; New Cumberland, 15th; Robertsburg, 19th; Romney, 5th, 13th, 14th, 16th, and 23d; St. Marys, 8th, 14th, 19th, 26th, and 29th; Smithfield, 13th, 14th, 16th, 18th, and 26th; Weston, 12th, 13th, 14th, 16th, 24th, and 26th; Wheeling, 13th, 15th, 19th, 26th, and 29th; Williamson, 8th and 9th.

Halos, lunar: Bayard, 11th, Wheeling, 18th.

Hail: Camden-on-Gauley, 21st.

Thunderstorms (dates and number of stations reporting): 1st, 4; 2d, 8; 3d, 5; 4th, 5; 5th, 4; 6th, 7; 9th, 4; 10th, 3; 11th, 8; 12th, 3; 15th, 1; 17th, 4; 18th, 4; 19th, 1; 20th, 12; 21st, 13; 22d, 2; 25th, 11; 26th, 1; 27th, 1; 29th, 1; 30th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, [a], [b], [c] appearing in the table indicate number of days missing; for example, [b] represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for September, 1921.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

VOL. XXIX. PARKERSBURG, W. VA., NOVEMBER, 1921. No. 11.

GENERAL SUMMARY.

The past month was one of the warmest and the wettest of November State record. Measureable amounts of precipitation were received on thirteen days as an average. The snowfall, however, was considerably below the normal and was unimportant in the agricultural districts. November was warmer in only three years since 1890, or in 1896, 1902, and 1909. While the precipitation was favorably distributed throughout the month and over the State, moderate to heavy rains during the last week caused high stages in the rivers for November. The conditions were generally favorable for outdoor work. Pastures also kept in excellent condition. At the close of the month corn was exceptionally dry for the season and winter grains were making good growth.

PRESSURE.

The mean sea-level pressures at Parkersburg and Elkins were 30.08 and 30.09 inches, respectively. The highest and lowest readings observed were as follows: Parkersburg, 30.53 inches on the 20th, and 29.49 inches on the 1st. Elkins, 30.51 inches on the 20th, and 29.51 inches on the 1st.

TEMPERATURE.

The monthly mean for the State, determined from 50 stations, was 46.1°. The departure from the normal for 44 stations having ten or more years of record was +3.5°. From the 1st to the 15th the weather was generally cool, although the temperature was slightly above the normal on the 1st, 4th, 7-9th, and 14th. After the 15th the temperature was continuously above the normal. The highest readings occurred on the 18th and the lowest on the 13th.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 81 per cent; 8 p. m., 74 per cent. The November averages for the same hours for the past 33 years are 81 and 72 per cent, respectively. Elkins, 8 a. m., 85 per cent; 8 p. m., 77 per cent. The November averages for Elkins for the same hours for the past 21 years are 84 and 73 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 73 stations, was 5.99 inches. The departure from the normal for 49 stations having ten or more years of record was +3.13 inches. Rain occurred in most districts on the 1st and daily from the 9th to the 20th and the 23d to the 28th, the greatest amounts being recorded on the 1st, 16-17th, 24th, and 27-28th. Snow flurries were observed at a few of the more elevated stations on the 2d, 3d, and 10th, and light snow was recorded in most localities on the 12-13th. Light snow also fell at several stations on the 28-29th.

RIVERS.

Owing to continued moderate to heavy rains from the 24th to the 28th, the rivers were about bankfull at the close of the month. The following crest stages were noted: Marietta, 34.0 feet; Parkersburg, 35.9 feet; Point Pleasant, 43.5 feet; Glenville, 24.1 feet; Creston, 20.3 feet; Charleston, 21.4 feet.

WIND.

The average wind velocity at Parkersburg was 6.3 miles per hour, or 0.3 mile above the November average for 31 years. The average at Elkins was 5.5 miles per hour, or 1.2 miles above the November average for 22 years. The highest velocity at Parkersburg was 28 miles per hour from the northwest on the 19th, and at Elkins 25 miles per hour from the west on the 4th.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 37 per cent of the possible amount, or 1 per cent above the November average for 24 years. The average at Elkins was 34 per cent, or 5 per cent below the November average for 22 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Bancroft, 8th, 22d, and 30th; Bluefield, 10th; Bruceton Mills, 14th; Charleston, 8th, 23d, and 30th; Creston, 11th, 22d, and 30th; Elkins, 8th; Grafton, 7th; Hinton, 8th, 11th, 18th, 22d, and 30th; Marlinton, 8th, 18th, and 22d; Morgantown, 8th, 16th, and 22d; Moundsville, 9th; Parkersburg, 1st; Piedmont, 1st; Raleigh, 30th; Rowlesburg, 8th, 22d, and 27th; Stony River Dam, 2d, 8th, 14th 27th, and 28th; Terra Alta, 2d and 14th; Wellsburg, 9th, 22d, and 27th; Weston, 1st; Wheeling, 8th, 13th, 21st, and 22d.

Halos, lunar: Parkersburg, 18th; Pickens, 8th.

Thunderstorms: (dates and number of stations reporting): 1st, 3; 2d, 1; 9th, 1; 16th, 14; 17th, 13; 18th, 1; 24th, 9; 26th, 1; 27th, 1; 29th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for November, 1921.

§ Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
CHARLES F. MARVIN, Chief.

UNIVERSITY OF ILLINOIS LIBRARY
FEB 2 1922

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXIX. Parkersburg, W. Va., December, 1921. No. 12.

GENERAL SUMMARY.

December was much warmer and also much wetter than usual. The average temperature for the State, 37°, was exceeded in December in only five years of record, while there were only six years with greater December precipitation. The month was characterized by nearly continuously moderate temperature and frequent and unfavorably distributed rains. Temperature much below the normal prevailed on only two or three days. Heavy rains over the central and western counties on the 23d-24th caused marked rises in the rivers. In the agricultural districts the snowfall was unimportant and the ground was bare practically all the month. In the more elevated sections the snowfall was moderate. The conditions were favorable for river traffic, outdoor work, corn husking, pastures, and winter grains.

PRESSURE.

The mean sea-level pressure at Parkersburg and Elkins was 30.09 inches. The highest and lowest readings observed were as follows: Parkersburg, 30.52 inches on the 15th, and 29.41 inches on the 13th. Elkins, 30.55 inches on the 15th, and 29.39 inches on the 13th.

TEMPERATURE.

The monthly mean for the State, determined from 51 stations, was 37.0°. The departure from the normal for 46 stations having ten or more years of record was +3.8°. The month opened warm and the temperature was also somewhat above the normal on the 6-7th, 11-12th, 16-20th, and 23d-24th, with the highest readings occurring generally on the 1st and 17th. The temperature was generally slightly below the normal on other dates, except the 22d and 30th, when the morning readings ranged generally from 8° to 15°, considerably below the normal.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 81 per cent; 8 p. m., 71 per cent. The December averages for the same hours for the past 32 years are 82 and 76 per cent, respectively. Elkins, 8 a. m., 86 per cent; 8 p. m., 79 per cent. The December averages for Elkins for the same hours for the past 21 years are 86 and 79 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 73 tations, was 4.25 inches. The departure from the normal for 9 stations having ten or more years of record was +0.94 inch. lost of the precipitation was received on the 2d-5th, 12-14th, 8th, and 23d-24th, the amounts on the 23d-24th being exessive in most of the central and western counties. Light to oderate snow fell in the more elevated sections on the 4-6th, 2-15th, 25th, and 29th, while light snow or snow flurries ccurred in most of the agricultural districts on the 4-5th, and 3-14th.

RIVERS.

Owing to heavy rain on the 23-24th the rivers were high in the district from the 24th to the 27th, with flood stages in the Little Kanawha River and in the Ohio River at Point Pleasant. The following crest stages were recorded: Dam 12, Wheeling, 27.1 feet; Marietta, 30.2 feet; Parkersburg, 32.3 feet; Point Pleasant, 43.9 feet; Huntington, 48.0 feet; Glenville, 26.4 feet; Creston, 21.0 feet.

WIND.

The average wind velocity at Parkersburg was 6.6 miles per hour, or 0.5 mile above the December average for 31 years. The average at Elkins was 6.8 miles per hour, or 1.9 miles above the December average for 22 years. The highest velocity at Parkersburg was 35 miles per hour from the northwest on the 2d, and at Elkins 39 miles per hour from the west on the 17th.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 31 per cent of the possible amount, or 3 per cent below the December average for 24 years. The average at Elkins was 31 per cent, or 7 per cent below the December average for 22 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Bancroft, 7th, 10th, 27th, and 28th; Bruceton Mills, 21st, 23d, and 24th; Creston, 7th; Glenville, 7th; Hinton, 1st and 28th; Huntington, 7th; New Cumberland, 7th and 20th; Parkersburg, 7th; Pickens, 8th and 21st; Terra Alta, 13th and 23d; Wheeling, 7th, 8th, 16th, 17th, 20th, 21st, and 28th; Williamson, 7th, 8th, 19th, 27th, and 28th.

Thunderstorms: Bancroft, 23d and 24th; Bluefield, Glenville, Parkersburg, and Ryan, 24th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for December, 1921.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXIX. PARKERSBURG, W. VA., YEAR, 1921. No. 13.

GENERAL SUMMARY.

The year was exceptionally warm, the average temperature, 55.6°, being the highest of State record, or nearly 1° above the State average for 1898. The maximum temperatures were well within previous records but the cold periods were of short duration and of only moderate intensity. While the precipitation averaged slightly below the normal it was well distributed and generally sufficient for crop growth. The snowfall was the lightest of State record, except for 1898 and 1919.

The winter, spring, and early fall months were warm, the temperature averaging much above the normal for February, March, and September. June and July were also warm, but May, August, and October were somewhat cooler than usual

The rainfall was deficient monthly until August, except for May, when it was in excess. October was also drier than usual. August, September, November, and December were wet, the November rainfall being the greatest of November State record.

The conditions were generally favorable for crops. However, cold periods in March and April caused great damage to fruit. Droughty conditions in June also caused nearly a total failure of the potato crop in many sections.

The season of growth was longer than usual, extending from about April 20 to October 13 in most of the agricultural districts, although killing frosts occurred near the middle of May in a few of the more elevated localities.

The average cloudiness was somewhat below the normal. The sunshine at Parkersburg averaged 57 per cent of the possible amount, or 11 per cent above the normal. The average at Elkins was 47 per cent. or 3 per cent above the normal.

The wind movement at Parkersburg was 46,845 miles and at Elkins 44,156 miles.

THE WEATHER BY MONTHS.

JANUARY.—January was much warmer and drier than usual and free from cold periods. It was one of the most pleasant months of winter record. The precipitation was favorably disributed and the snowfall averaged about one-half of the normal. The temperature was lowest on the 12-13th, 18-20th, and 25-26th.

FEBRUARY.—February, like December and January, was nearly continuously seasonably warm and pleasant, completing one of the warmest and most favorable winters of State record. The precipitation was considerably below the normal and well distributed, although the snowfall was slightly above the normal, due to a moderately heavy storm at the beginning of the last ecade. The highest temperatures, near the February State ecord, occurred on the 16th.

MARCH.—March was exceptionally warm, the average temerature being 1.4° higher than the previous warmest March of tate record and 10° above the March normal. Peach, pear, lum, and cherry trees were in bloom during the last decade, nd freezing temperature on the 28th caused great damage. The rainfall averaged considerably below the normal and the nowfall was unimportant.

APRIL.—April was an exceptionally pleasant month. The verage temperature for the State, 55.8°, was the highest of pril record, except in 1896, the rainfall was much below the ormal and well distributed, and more sunshine was received han during any other April of record. However, owing to the nseasonably warm weather during February and March, which developed fruit buds and bloom, a cold period on the 11-12th caused great damage to fruit.

MAY.—While May averaged only somewhat cooler than usual, the month was characterized by nearly continuously cool weather until the 20th and by moderately warm weather during the last decade. Temperature near freezing or slightly below occurred in many localities on the 1st, 9th, and 17th, causing considerable damage to fruit and wheat. The rainfall was above the normal. Heavy and washing rains were received in the eastern counties. Hail also caused considerable damage in a few localities.

JUNE.—June was much warmer and drier than usual. The conditions were generally decidedly droughty until near the end

(Continued on page 51.)

THE WEATHER BY MONTHS.

(Continued from page 49.)

of the second decade, causing considerable damage to crops, especially potatoes, oats and meadows Torrential rains, attending an electrical storm, fell during the 18th and night of the 18-19th over the western portions of Wetzel and Tyler counties and the northern portion of Doddridge County, causing much damage to crops, roads and oil interests.

JULY.—July was nearly continuously warm, sunshiny, and generally dry. The night temperatures were especially high. As the late winter and early spring months were warm, with also high temperatures in June and July, crops of all kinds were from two to three weeks in advance of the normal at the close of the month. Corn, however, was damaged in sections by high winds during rain squalls and by dry weather during the last decade.

AUGUST.—August was cool. About one-half of the month's rainfall was received on the 2-3d, while the conditions were droughty during the last decade, causing slight damage to corn and pastures.

SEPTEMBER.—September was especially wet and warm. The rainfall was the greatest of September State record, causing con-

THE WEATHER BY MONTHS.

(Continued from page 51.)

siderable delay in farm work. A high wind on the 17th caused much damage to wires and roofs in the central portion of Jackson County.

OCTOBER.—October was slightly cooler and somewhat drier than usual. Nearly one-half of the month's rainfall was received on the 30th-31st. Killing frosts occurred on the 13th and 14th, but not much damage resulted. The weather was favorable for drying and husking corn.

NOVEMBER.—This month was one of the warmest and the wettest of November State record. Moderately heavy rain during the last week caused high stages in the rivers.

DECEMBER.—December was characterized by nearly continuously moderate temperature and frequent and unfavorably distributed rains. Heavy rains over the central and western counties on the 23d-24th caused marked rises in the rivers. In the agricultural districts the ground was bare practically all the month.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

VOL. XXX. PARKERSBURG, W. VA., JANUARY, 1922. No. 1.

GENERAL SUMMARY.

January averaged somewhat colder and much drier than usual, although the temperature over the west-central counties averaged practically normal. While the precipitation was favorably distributed, the snowfall over the eastern counties averaged nearly 20 inches, but the average over the western counties was less than 3 inches. The lowest temperatures also occurred over the eastern portions of the State, a temperature of zero or below not being recorded over the western counties. The sunshine was abundant, the amount received over the western counties being the greatest of January record. The weather was favorable for outdoor work, winter grains, and transportation, although transportation in the eastern and central counties was somewhat delayed by heavy snow on the 11-12th.

PRESSURE.

The mean sea-level pressure at Parkersburg and Elkins was 30.23 inches. The highest and lowest readings observed were as follows: Parkersburg, 30.77 inches on the 23d, and 29.36 inches on the 11th. Elkins, 30.69 inches on the 7th, and 29.26 inches on the 11th.

TEMPERATURE.

The monthly mean for the State, determined from 48 stations, was 30.2°. The departure from the normal for 44 stations having ten or more years of record was —1.9°. The month opened cold and the temperature was also considerably below the normal from the 12th to the 14th and the 22d to the 27th, with the lowest temperatures occurring generally on the 13th and 25th. Moderately warm weather prevailed on the 3d-5th, 9-10th, 18-19th, and 30th-31st, with the highest temperatures occurring on the 4th.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 76 per cent; 8 p. m., 67 per cent. The January averages for the same hours for the past 33 years are 83 and 77 per cent, respectively. Elkins, 8 a. m., 87 per cent; 8 p. m., 74 per cent. The January averages for Elkins for the same hours for the past 21 years are 85 and 78 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 72 stations, was 2 75 inches. The departure from the normal for 59 stations having ten or more years of record was —1.16 inches. Most of the precipitation was received on the 4-5th, 8-9th, 11-12th, 18-19th, 21st, and 27-28th, the amounts being greatest on the 11th, when light to moderate snow was received over the western and central counties and heavy snow over the eastern counties. Light to moderate snow also fell in most sections on the 1st, 12-13th, and 27-28th. Heavy snow, however, fell over the southeastern counties on the 27th.

WIND.

The average wind velocity at Parkersburg was 6.2 miles per hour, or 0.4 mile below the January average for 32 years. The average at Elkins was 5.9 miles per hour, or 0.8 mile above the January average for 22 years. The highest velocity at Parkersburg was 29 miles per hour from the northwest on the 1st, and at Elkins 31 miles per hour from the northwest on the 11th.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 51 per cent of the possible amount, or 23 per cent above the January average for 24 years. The average at Elkins was 42 per cent, or 13 per cent above the January average for 21 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Bruceton Mills, 4th, 18th, and 19th; Charleston, 17th; Clay, 19th; Hinton, 30th; Moundsville, 7th and 30th; Stony River Dam, 21st; Wheeling, 7th, 8th, 10th, 17th, 23d, 26th, 27th, 30th, and 31st.

Halos, lunar: Bayard, 8th, and 11th; Bruceton Mills, 20th; Parkersburg, 7th; Pickens, 7th and 10th; Piedmont, 8th.

Halos, solar: Bruceton Mills and Ryan, 10th.

Sleet: Bayard, 9th; Bens Run, 21st; Brandywine, 8th; Burlington, 8th; Davis, 22d; Elkins, 11th and 29th; Fairmont, 18th; Marlinton, 8th, 11th, and 18th; Martinsburg, 8th; Moorefield, 8th and 19th; Pickens, 19th; Piedmont, 8th; Ryan, 21st; Wheeling, 21st.

Thunderstorms: Bancroft, 18th, 19th, 21st; Charleston, 18th; Evans, 18th and 21st; Upper Tract, 19th; Pickens, 19th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, [a], [b], [c] appearing in the table indicate number of days missing; for example, [b] represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for January, 1922.

CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

VOL. XXX. PARKERSBURG, W. VA., FEBRUARY, 1922. NO. 2.

GENERAL SUMMARY.

The past month, with an average temperature of 38.2°, was the warmest February of State record, except in 1909, 1911, and 1915, when the average February temperatures were 40.4°, 38.7°, and 38.4°, respectively. The month was nearly continuously warm, moderately cold weather prevailing on only two or three days. The precipitation averaged slightly below the normal and was well distributed throughout the month. The monthly amounts received over the western counties, however, were considerably smaller than over the mountain sections and eastern panhandle counties. The snowfall was much below the normal and heaviest over the eastern counties. The sunshine was in excess. The conditions were generally favorable for outdoor work and winter grains. There was a light snowcover during the coldest period of the month. The rivers were at moderate stages and practically free from ice.

PRESSURE.

The mean sea-level pressures at Parkersburg and Elkins were 30.15 and 30.16 inches, respectively. The highest and lowest readings observed were as follows: Parkersburg, 30.64 inches on the 28th, and 29.59 inches on the 6th. Elkins, 30.64 inches on the 17th, and 29.58 inches on the 2d.

TEMPERATURE.

The monthly mean for the State, determined from 49 stations, was 38.2°. The departure from the normal for 45 stations having ten or more years of record was +6.4°. The temperature was considerably above the normal from the 1st to the 6th, 10th to the 12th, and the 19th to the 24th, with the highest readings on the 22d and 23d. Somewhat colder weather than usual prevailed on the 8-9th and from the 13th to the 17th, with the lowest temperatures on the 17th.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 74 per cent; 8 p. m., 64 per cent. The February averages for the same hours for the past 33 years are 82 and 76 per cent, respectively. Elkins, 8 a. m., 87 per cent; 8 p. m., 75 per cent. The February averages for Elkins for the same hours for the past 21 years are 84 and 74 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 72 stations, was 2 89 inches. The departure from the normal for 49 stations having ten or more years of record was −0.21 inch. Most of the precipitation was received on the 1st-2d. 6-7th, 11-12th, 15th, 19-20th, and 27th, the greatest amounts being recorded on the 11th, 15th, 20th, and 27th. Snow fell in most localities on the 7th, 9th, and 15th, and in the more elevated sections also on the 8th, 16-17th, and 28th. The falls were light over the western counties and moderate over the mountain districts and eastern panhandle counties. The greatest amounts were received on the 15th.

WIND.

The average wind velocity at Parkersburg was 7.2 miles per hour, or 0.1 mile below the February average for 32 years. The average at Elkins was 6.6 miles per hour, or 0.9 mile above the February average for 23 years. The highest velocity at Parkersburg was 36 miles per hour from the southwest on the 23d, and at Elkins 36 miles per hour from the northwest on the 2d.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 45 per cent of the possible amount, or 9 per cent above the February average for 24 years. The average at Elkins was 43 per cent, or 4 per cent below the February average for 22 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Davis, 27th; Hinton, 22d; Marlinton, 21st, 22d, and 23d; Pickens, 27th and 28th: Smithfield, 20th; Stony River Dam, 6th, 12th, 27th, and 28th; Terra Alta, 10th, 12th, and 25th; Union, 15th, Wellsburg, 15th; Wheeling, 1st, 10th, 17th. and 20th.

Hail: Bruceton Mills, 12th.

Halos, lunar: Cairo and Parkersburg, 8th; Wellsburg, 7th.

Halos, solar: Bruceton Mills, 4th; Ryan, 17th.

Haze, dense: Bayard, 25th, 26th, and 28th.

Sleet: Beckley, 28th; Brandywine, 19th; Moorefield, 19th; Smithfield, 6th; Wheeling, 12th and 19th.

Thunderstorms (dates and number of stations reporting): 2d, 1; 10th, 11; 11th, 34; 12th, 32; 13th, 7; 19th, 9; 20th, 8; 22d, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, a, b, c appearing in the table indicate number of days missing; for example, b represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for February, 1922.

Except as otherwise indicated observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at the time of observation.

*** Regular Weather Bureau station; precipitation is for 24-hour period, midnight to midnight.

|| Precipitation measured in the morning: amount then recorded is for the preceding 24 hours. * Precipitation included in the next following measurement.

T. Trace, or less than 0.01 inch.

††† Probably incomplete.

Daily Temperatures for February, 1922.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXX. Parkersburg, W. Va., March, 1922. No. 3.

GENERAL SUMMARY.

The month was much wetter and considerably warmer than usual. The average precipitation was the greatest of March State record, except in 1899, 1908, and 1917. However, the snowfall was considerably below the average and unimportant in the agricultural districts. The precipitation was exceptionally well distributed over the State and throughout the month and the rivers were only at moderate stages. While also unusually warm, fruit buds were not fully developed at the close of the month, making a good outlook for fruit. Wheat made good growth, but spring plowing was delayed by wet weather.

PRESSURE.

The mean sea-level pressures at Parkersburg and Elkins were 30.10 and 30.11 inches, respectively. The highest and lowest readings observed were as follows: Parkersburg, 30.60 inches on the 1st, and 29.43 inches on the 20th. Elkins, 30.61 inches on the 1st, and 29.43 inches on the 20th.

TEMPERATURE.

The monthly mean for the State, determined from 48 stations, was 45.0°. The departure from the normal for 44 stations having ten or more years of record was +2.4°. The month opened cool and the temperature was generally slightly below the normal from the 16th to the 18th and considerably below the normal from the 21st to the 24th, with the lowest readings occurring on the 23d. The warmest weather prevailed from the 10th to the 15th and the 24th to the 31st, with the highest temperatures occurring generally on the 25th.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 77 per cent; 8 p. m., 63 per cent. The March averages for the same hours for the past 33 years are 79 and 69 per cent, respectively. Elkins, 8 a. m., 81 per cent; 8 p. m., 65 per cent. The March averages for Elkins for the same hours for the past 22 years are 82 and 69 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 72 stations, was 5.33 inches. The departure from the normal for 48 stations having ten or more years of record was +1.50 inches. The precipitation was heaviest over the central and western counties and lightest over the eastern and southern counties. There were general rains or snows on the 1st-2d, 4-5th, 7-8th, 10-11th, 14-15th, 19th-22d, 27-28th, and 30th-31st, the greatest amounts of precipitation being recorded on the 10-11th and 14-15th. Most of the snowfall was received on the 1st, 4-5th, and 20th-21st, but in a few of the more elevated localities light snow also fell on the 7-8th and 15-16th.

WIND.

The average wind velocity at Parkersburg was 6.5 miles per hour, or 0.8 mile below the March average for 33 years. The average at Elkins was 6.7 miles per hour, or 0.9 mile above the March average for 23 years. The highest velocity at Parkersburg was 30 miles per hour from the northwest on the 31st, and at Elkins 34 miles per hour from the west on the 31st.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 49 per cent of the possible amount, or 8 per cent above the March average for 24 years. The average at Elkins was 39 per cent, or 1 per cent below the March average for 23 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Bruceton Mills, 2d and 14th; Charleston, 28th; Elkins, 6th; Grafton, 16th; Hinton, 6th; Hoult, 6th and 25th; Rowlesburg, 6th; Wheeling, 3d, 6th, 9th, 13th, and 25th.

Hail: Bayard, Beckley, Romney, and Stony River Dam, 1st; Elkins, 4th; Bens Run, 28th; Creston, New Cumberland, New Martinsville, Parkersburg, and Wheeling, 31st.

Halos, lunar: Cairo, 9th; Ryan, 11th.

Halos, solar: Cairo, 30th.

Sleet: Bayard, 1st and 4th; Beckley, 1st; Ben Run, 1st; Cairo, 2d, 4th, and 7th; Charleston, 2d; Cheat Bridge, 1st and 4th; Davis, 2d, 3d, and 4th; Elkins, 1st and 4th; Huntington, 1st; Marlinton, 1st, 3d, and 11th; Miller, 1st; Moorefield, 2d; Moundsville, 4th; New Martinsville, 2d; Parkersburg, 7th; Piedmont, 1st; Romney, 1st and 4th; Rowlesburg, 4th; Ryan, 1st; Smithfield, 2d and 20th; Stony River Dam, 1st and 4th; Union, 1st and 4th; Wheeling, 1st.

Thunderstorms (dates and number of stations reporting): 10th, 3; 11th, 3; 13th, 1; 14th, 2; 28th, 6; 29th, 4; 30th, 1; 31st, 11.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, ª, ᵇ, ᶜ appearing in the table indicate number of days missing; for example, ᵇ represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for March, 1922.

§ Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

MAY

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXX. Parkersburg, W. Va., April, 1922. No. 4.

GENERAL SUMMARY.

April was considerably warmer than usual, with the temperature generally much above the normal from the 3d to the 19th and slightly to much below the normal during the last ten days. Killing frosts and freezing temperatures occurred in most districts on the 22d, 23d, and 24th, and in many districts on the 29th and 30th, causing great damage to fruit in the central, northern, and eastern counties, especially in low orchards. The damage in ridge orchards was generally not severe. The rainfall was somewhat below the average and was rather unfavorably distributed. Heavy rain over the western and central counties on the 14-15th caused marked rises in the rivers. The snowfall was unimportant, the State average being only one-tenth of an inch. Practically no snow was received in the western half of the State. Growth was generally rapid during the first and second decades and the conditions were favorable for farm work until the 14th, when wet weather set in.

PRESSURE.

The mean sea-level pressure at Parkersburg and Elkins was 30.10 inches. The highest and lowest readings observed were s follows: Parkersburg, 30.52 inches on the 24th, and 29.34 inches on the 11th. Elkins, 30.51 inches on the 24th, and 29.23 inches on the 11th.

TEMPERATURE.

The monthly mean for the State, determined from 49 stations, vas 54.4°. The departure from the normal for 44 stations having ten or more years of record was +2.9°. The month pened with the temperature somewhat below the normal, but unseasonably warm weather prevailed from the 3d to the 18th. xcept the 12th and 15th, when the temperature was practically ormal. Cool weather prevailed from the 20th to the end of he month, the temperature being generally near freezing or omewhat below from the 21st to the 24th and on the last two ays. The highest temperatures were general on the 8th and 0th.

HUMIDITY.

The averages of the humidity readings at Parkersburg and lkins at 8 a. m. and 8 p. m., with the normals, were s follows: Parkersburg, 8 a. m., 69 per cent; 8 p. m., 54 er cent. The April averages for the same hours for the ast 33 years are 75 and 62 per cent, respectively. Elkins, 8 m., 75 per cent; 8 p. m., 57 per cent. The April averges for Elkins for the same hours for the past 22 years are 79 nd 64 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 72 ations, was 3.15 inches. The departure from the normal for stations having ten or more years of record was −0.37 inch. he rainfall was heaviest over the western and central counties d lightest over the extreme eastern counties. Most of the infall was received on the 7-8th, 10-11th, 14-15th, 17-18th, st-22d, 25-26th, and 28th, the greatest amounts being received the 14-15th. Light snow fell in a few of the more elevated localities on the 1st and in many sections of the central and northern counties on the 21st. Light snow also fell at a few stations in the southeastern counties on the 28th.

HAIL.

Light hail fell at New Cumberland and Wellsburg on the 10th and at Buckhannon and Creston on the 14th. Heavy hail fell in the vicinity of Wheeling on the 10th and at Pickens on the 14th, causing some damage to fruit.

WIND.

The average wind velocity at Parkersburg was 7.0 miles per hour, or 0.2 mile above the April average for 32 years. The average at Elkins was 6.9 miles per hour, or 1.7 miles above the April average for 22 years. The highest velocity at Parkersburg was 35 miles per hour from the southwest on the 11th, and at Elkins 33 miles per hour from the northwest on the 14th.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 51 per cent of the possible amount, or 4 per cent above the April average for 24 years. The average at Elkins was 48 per cent, or 4 per cent above the April average for 23 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Bancroft, 23d and 30th; Bayard, 5th; Glenville, 26th; Marlinton, 5th and 22d; Morgantown, 22d; Parkersburg, 26th; Romney, 21st and 22d.

Halos, lunar: Cairo and Pickens, 5th; Bayard, 11th.

Sleet: Bayard, 1st: Parkersburg and Smithfield, 21st.

Thunderstorms (dates and number of stations reporting): 1st, 3; 2d, 1; 7th, 3; 8th, 4; 10th, 1; 13th, 4; 14th, 20; 15th, 8; 17th, 5.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are us determining section or division means.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for April, 1922.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

VOL. XXX. PARKERSBURG, W. VA., MAY, 1922. No. 5.

GENERAL SUMMARY.

May was considerably warmer than usual and the temperature conditions were generally favorable for germination and growth after the 1st. Heavy to killing frosts, with the temperature below freezing in the more elevated localities and only slightly above freezing in most of the agricultural districts, were general on the 1st. In a few of the mountain districts frosts also occurred on the 15th and 29th. The low temperature on the 1st caused considerable damage to fruit, although the greater part of fruit on low grounds was killed during the last week in April. The rainfall averaged slightly below the normal and was well distributed throughout the month, but was generally unfavorably distributed over the State. In many of the agricultural districts the amounts were considerably in excess, retarding germination and delaying farm work. However, there was no damage from flooding or washing. There were many complaints of fruit dropping, and at the close of the month wheat had commenced to rust in localities. Potatoes, oats, meadows, and pastures made excellent growth.

PRESSURE.

The mean sea-level pressure at Parkersburg and Elkins was 30.00 inches. The highest and lowest readings observed were as follows: Parkersburg, 30.41 inches on the 1st, and 29.32 inches on the 18th. Elkins, 30.43 inches on the 1st, and 29.27 inches on the 18th.

TEMPERATURE.

The monthly mean for the State, determined from 47 stations, was 63.7°. The departure from the normal for 42 stations having ten or more years of record was +1.8°. The month opened with low temperature, but the daily averages were generally somewhat to considerably above the normal from the 2d to the 4th, 9th to the 13th, and the 22d to the 27th, with the highest readings on the 23d and 24th. The temperature was near the normal or somewhat below on the 1st, 5-6th, 14-15th, 17-19th, and 28th-31st, with the lowest readings on the 1st.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 77 per cent; 8 p. m., 65 per cent. The May averages for the same hours for the past 32 years are 75 and 64 per cent, respectively. Elkins, 8 a. m., 82 per cent; 8 p. m., 64 per cent. The May averages for Elkins for the same hours for the past 21 years are 79 and 64 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 70 stations, was 3.67 inches. The departure from the normal for 48 stations having ten or more years of record was −0.22 inch. Rain fell daily in most localities from the 3d to the 6th, 10th to the 13th, 17th to the 21st, and the 25th to the 27th, the greatest amounts being recorded on the 12-13th, 18-19th, and 26th. On the 6th, 20th, and 21st, however, there were generally only light and scattered showers.

HAIL.

Light hail fell in sections of Raleigh County on the 20th and Mason and Wirt counties on the 25th.

WIND.

The average wind velocity at Parkersburg was 4.1 miles per hour, or 1.2 miles below the May average for 32 years The average at Elkins was 4.1 miles per hour, or 0.1 mile below the May average for 21 years. The highest velocity at Parkersburg was 22 miles per hour from the southeast on the 16th, and at Elkins 29 miles per hour from the southwest on the 19th.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 54 per cent of the possible amount, or normal as compared with the May average for 24 years. The average at Elkins was 56 per cent, or 2 per cent below the May average for 23 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Bancroft, 8th: Bayard, 21st; Brandywine, 20th; Cairo, 11th; Elkins, 22d; Fairmont, 5th and 17th; Glenville, 11th; Hinton, 20th; Marlinton, 14th, 15th, 16th, 20th, 23d, 24th, 25th, 28th, 29th, 30th, and 31st; Parkersburg, 6th; Romney, 21st, 22d, 23d, 24th, and 29th; St. Marys, 30th; Wheeling, 11th and 16th; Williamson, 15th and 22d.

Thunderstorms (dates and number of stations reporting): 4th, 5: 5th, 5; 6th. 2; 10th, 6; 11th, 2; 12th, 8; 13th, 2; 16th, 1; 17th, 1; 18th, 4; 19th, 2; 22d, 1; 24th, 2; 25th, 9; 26th, 2; 27th, 3.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, a, b, c appearing in the table indicate number of days missing; for example, b represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for May, 1922.

CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

VOL. XXX. PARKERSBURG, W. VA., JUNE, 1922. No. 6.

GENERAL SUMMARY.

June was considerably warmer and wetter than usual, with the rainfall unfavorably distributed The amounts received over the central and west-central counties were much above the normal, while over the eastern and south-eastern counties the conditions were generally droughty. The month was also characterized by excessive local rains. Excessive rain fell near Dunmore, Pocahontas County, on the 4th, and at Sistersville, Wetzel County, on the 8th, causing considerable damage to crops. On the 11th and 17th excessive rain also fell in many localities of the west-central counties, causing floods in the smaller streams and much damage to crops. The streams were especially high in sections of Jackson and Roane counties on the 11th, causing considerable damage to roads and bridges. High winds on the 11th and 12th, attending thunderstorms, also caused some damage to crops and roofs in sections of Ritchie, Lewis, and Randolph counties. In most localities crops made good growth during the month and were in good condition at the close of the month. The yield of wheat was unsatisfactory, however, owing to cold weather in the spring.

PRESSURE.

The mean sea-level pressures at Parkersburg and Elkins were 30.01 and 30.00 inches, respectively. The highest and lowest readings were observed as follows: Parkersburg, 30.24 inches on the 24th, and 29.67 inches on the 11th. Elkins, 30.27 inches on the 24th, and 29.67 inches on the 11th.

TEMPERATURE.

The monthly mean for the State, determined from 47 stations, was 70.7°. The departure from the normal for 41 stations having ten or more years of record was +1.8°. The month opened with the temperature near normal, but moderately warm weather prevailed from the 3d to the 11th, on the 16-17th, and from the 28th to the close of the month, with the highest temperatures occurring generally on the 17th and 30th. Cool weather prevailed on the 13th and 22-23d. A light frost was observed at Bayard, Grant County, on the 22d, and in sections of Grant, Hancock, Monroe, and Randolph counties on the 23d. A light frost also occurred in sections of Hancock County on the 26th. No damage of consequence resulted.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 80 per cent; 8 p. m., 70 per cent. The June averages for the same hours for the past 32 years are 78 and 68 per cent, respectively. Elkins, 8 a. m., 89 per cent; 8 p. m., 81 per cent. The June averages for Elkins for the same hours for the past 22 years are 84 and 73 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 71 stations, was 4.66 inches. The departure from the normal for 50 stations having ten or more years of record was +0.45 inch. Most of the rainfall was received from the 2d to the 5th, 8th to the 12th, and on the 16-17th, 20th, and 27-28th. Scattered showers also fell in the southern counties on the 25th and 26th. The heaviest rain was received on the 11th, 16-17th, and 27-28th.

HAIL.

Light hail fell in sections of Barbour, Gilmer, and Wirt counties on the 11th, in Ritchie County on the 11th and 17th, Webster County 11th and 28th, and in Berkeley and Wood counties on the 17th.

Moderate hail, doing apparently only slight damage, fell in sections of Pocahontas County on the 4th, Randolph County on the 17th, and in Wetzel County on the 11th and 20th.

WIND.

The average wind velocity at Parkersburg was 4.3 miles per hour, or 0.3 mile below the June average for 32 years The average at Elkins was 3.9 miles per hour, or 0.5 mile above the June average for 23 years. The highest velocity at Parkersburg was 36 miles per hour from the northwest on the 11th, and at Elkins 25 miles per hour from the northwest on the 11th.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 55 per cent of the possible amount, or 3 per cent below the June average for 24 years. The average at Elkins was 46 per cent, or 6 per cent below the June average for 23 years.

MISCELLANEOUS PHENOMENA.

Thunderstorms (dates and number of stations reporting): 2d, 2; 3d, 2; 4th, 11; 5th, 3; 8th, 3; 9th, 3; 10th, 4; 11th, 10; 12th, 10; 15th, 1; 16th, 6; 17th, 14; 18th, 6; 19th, 2; 20th, 1; 21st, 4; 26th, 4; 27th, 10; 28th, 14.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, [a], [b], [c] appearing in the table indicate number of days missing; for example, [b] represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for June, 1922.

SEP 25 1922

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

VOL. XXX. PARKERSBURG, W. VA., JULY, 1922. No. 7.

GENERAL SUMMARY.

The temperature and rainfall averaged slightly below the normal, but the rainfall was unfavorably distributed throughout the month and over the State. In most of the central and southern counties frequent rains delayed harvesting and also caused some damage to hay and shocked grains. The conditions were decidedly droughty in most localities of the northern and eastern panhandle counties, especially in Brooke, Hancock, and Mineral counties, causing considerable damage to growing crops and pastures. It was also too dry for corn in practically all localities of the western counties from the 15th to the 27th. The temperature was generally especially favorable for growth and comfort. High winds on the 27th caused considerable damage to buildings and crops over a small area in the east-central portion of Monongalia County. At the close of the month corn was in good condition and growing rapidly, oats were mostly harvested, and haying was well advanced.

PRESSURE.

The mean sea-level pressures at Parkersburg and Elkins were 30.05 and 30.04 inches, respectively. The highest and lowest readings observed were as follows: Parkersburg, 30.26 inches on the 13th, and 29.81 inches on the 23d. Elkins, 30.19 inches on the 4th, and 29.78 inches on the 23d.

TEMPERATURE.

The monthly mean for the State, determined from 44 stations, was 72.9°. The departure from the normal for 40 stations having ten or more years of record was —0.1°. The month opened moderately warm and the temperature was also somewhat above the normal from the 9th to the 12th, 16th to the 18th, and the 23d to the 28th, with the highest readings occurring generally on the 11th and 12th. Exceptionally cool weather for the season prevailed from the 3d to the 6th. The maximum temperatures on the 4th ranged generally from 67° to 72°, the lowest July mid-day temperatures of State record at several stations. The temperature was slightly below the normal on the 13-14th, 19th-22d, and 29-30th.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were s follows: Parkersburg, 8 a. m., 81 per cent; 8 p. m., 70 er cent. The July averages for the same hours for the ast 34 years are 79 and 67 per cent, respectively. Elkins, 8 . m., 89 per cent; 8 p. m., 82 per cent. The July averges for Elkins for the same hours for the past 22 years are 87 nd 77 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 64 tations, was 4.53 inches. The departure from the normal for 3 stations having ten or more years of record was —0.19 inch. he rainfall was lightest over the northern and western counties nd heaviest over the central counties. Most of the precipitation vas received from the 1st to the 4th and on the 8th, 12-13th, 7-18th, 23d-24th, and 28-29th. Showers also fell in the southern counties on the 26-27th. The rainfall was heaviest on the 3d, 13th, 18th, and 23d-24th.

HAIL.

Light hail fell in sections of Wood County on the 1st and in sections of Pleasants and Ritchie counties on the 28th. Moderate hail fell over a small area in the northern portion of Tucker County on the 28th.

WIND.

The average wind velocity at Parkersburg was 4.2 miles per hour, or 0.3 mile below the July average for 32 years. The average at Elkins was 3.4 miles per hour, or 0.3 mile above the July average for 23 years. The highest velocity at Parkersburg was 27 miles per hour from the northwest on the 12th, and at Elkins 21 miles per hour from the west on the 23d.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 59 per cent of the possible amount, or 2 per cent below the July average for 25 years. The average at Elkins was 55 per cent, or 2 per cent above the July average for 22 years.

MISCELLANEOUS PHENOMENA.

Halos, lunar: Wheeling, 7th and 9th.

Haze: Bayard, 1st.

Thunderstorms (dates and number of stations reporting): 1st, 8; 2d, 12; 3d, 2; 12th, 6; 13th, 6; 15th, 1; 16th, 2; 17th, 8; 18th, 6; 19th, 1; 20th, 1; 21st, 2; 23d, 10; 24th, 2; 26th, 2; 27th, 5; 28th, 6; 29th, 1; 31st, 4.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used
determining section or division means.

Reference letters, a, b, c appearing in the table indicate number of days missing: for example, b represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for July, 1922.

CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXX. Parkersburg, W. Va., August, 1922. No. 8.

GENERAL SUMMARY.

The temperature averaged nearly 3° below the normal and the month was characterized by nearly continuously cool weather, although the temperature was moderately high for a few days during the second decade. The 21st-22d was exceptionally cool for the season, the lowest temperature of August record occurring at several stations on the 21st. In sections of Grant and Tucker Counties the temperature was slightly below the freezing point, causing considerable damage to buckwheat and gardens and slight damage to corn. While the rainfall averaged slightly below the normal, it was unfavorably distributed over the State and throughout the month. Over the central-western counties the amounts were excessive. At Parkersburg the 36-hour and 48-hour amounts were the greatest of record. Over most of the extreme eastern counties the conditions were decidedly droughty most of the month. The rainfall was also considerably deficient in most other localities from the 10th to the 24th. Crops were considerably damaged by drought in the eastern and northern counties, and heavy rain and high winds caused some damage to corn in the central-western counties; but the conditions were generally favorable for crop growth.

PRESSURE.

The mean sea-level pressures at Parkersburg and Elkins were 30.04 and 30.03 inches, respectively. The highest and lowest readings observed were as follows: Parkersburg, 30.30 inches on the 14th, and 29.69 inches on the 25th. Elkins, 30.31 inches on the 15th, and 29.68 inches on the 25th.

TEMPERATURE.

The monthly mean for the State, determined from 47 stations, was 68.9°. The departure from the normal for 43 stations having ten or more years of record was —2.8°. The temperature was generally slightly to somewhat below the normal from he 1st to the 15th, generally considerably below from the 20th o the 23d, and slightly below from the 26th to the 30th, with he lowest readings on the 21st and 22d. Moderately warm veather prevailed from the 15th to the 19th, with the highest emperatures occurring on the 17th and 18th.

HUMIDITY.

The averages of the humidity readings at Parkersburg and lkins at 8 a. m. and 8 p. m., with the normals, were s follows: Parkersburg, 8 a. m., 82 per cent; 8 p. m., 73 er cent. The August averages for the same hours for the ast 34 years are 81 and 70 per cent, respectively. Elkins, 8 . m., 93 per cent; 8 p. m., 84 per cent. The August averges for Elkins for the same hours for the past 22 years are 90 nd 81 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 69 ations, was 3.87 inches. The departure from the normal for 7 stations having ten or more years of record was —0.07 inch. howers occurred in many localities from the 1st to the 3d, on e 7th and 8th, from the 14th to the 16th, and on the 19th. eavy rain occurred in most districts on the 24-25th. There were also scattered light showers on the 27th and 30th. The rainfall was much the heaviest on the 24-25th, but moderately heavy rain fell at several stations on the 3d, 7-8th, and 15th.

HAIL.

Light hail fell in sections of Taylor County on the 3d and Webster County on the 3d and 15th.

WIND.

The average wind velocity at Parkersburg was 3.9 miles per hour, or 0.3 mile below the August average for 32 years The average at Elkins was 3.2 miles per hour, or 0.4 mile above the August average for 23 years. The highest velocity at Parkersburg was 28 miles per hour from the northwest on the 18th, and at Elkins 18 miles per hour from the northwest on the 7th.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 68 per cent of the possible amount, or 12 per cent above the August average for 25 years. The average at Elkins was 50 per cent, or 1 per cent below the August average for 23 years.

MISCELLANEOUS PHENOMENA.

Halos, lunar: Bayard, 7th, 8th, and 27th.
Halo, solar: Ryan, 21st.
Haze: Bayard, 6th, 11th, and 12th.
Thunderstorms (dates and number of stations reporting): 1st, 4; 2d 9; 3d, 16; 4th, 4; 7th, 12; 8th, 7; 9th, 1; 14th, 1; 15th, 4; 16th, 2; 17th, 3; 18th, 3; 19th, 1; 24th, 12; 25th, 9; 26th, 3; 30th, 1; 31st, 2.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for August, 1922.

§ Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXX. Parkersburg, W. Va., September, 1922. No. 9.

GENERAL SUMMARY.

The month was exceptionally sunshiny and nearly continuously warm, without marked extremes in temperature. As an average, there were 21 clear days and the sunshine at Parkersburg and Elkins averaged nearly 20 per cent above the September normal. While the rainfall averaged only .60 inch below the normal, one of the longest and most severe droughts of State record set in near the close of the first decade and extended well into October. Practically all the month's rainfall was received during the 2-3d and there was no rain of consequence after the 12th. The drought was most severe over the eastern counties, where the August rainfall was also light. Owing to the lateness of the season, however, the damage to crops was not great, and the conditions were favorable for harvesting, thrashing, and the ripening of corn; but the drought practically suspended navigation in the district and oil drilling operations, delayed seedings, and caused much damage to pastures. While freezing temperature occurred at a few of the more elevated stations, there was no frost damage in the agricultural districts.

PRESSURE.

The mean sea-level pressures at Parkersburg and Elkins were 30.13 and 30.16 inches, respectively. The highest and lowest readings observed were as follows: Parkersburg, 30.38 inches on the 26th, and 29.85 inches on the 11th. Elkins, 30.44 inches on the 26th, and 29.80 inches on the 11th.

TEMPERATURE.

The monthly mean for the State, determined from 44 stations, was 67.2°. The departure from the normal for 39 stations having ten or more years of record was +1.6°. The temperature was continuously above the normal, except during three 48-hour periods, the warmest weather occurring from the 6th to the 10th. The temperature was slightly below the normal on the 12-13th, and somewhat below on the 16-18th and 25-26th, the lowest reading occurring on the 26th.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 85 per cent; 8 p. m., 74 per cent. The September averages for the same hours for the past 34 years are 84 and 71 per cent, respectively. Elkins, 8 a. m., 96 per cent; 8 p. m., 83 per cent. The September averages for Elkins for the same hours for the past 21 years are 92 and 83 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 65 stations, was 2.14 inches. The departure from the normal for 43 stations having ten or more years of record was —0.60 inch. The rainfall was heaviest over the central-western counties and lightest over the eastern counties. Nearly all the rainfall was received on the 2-3d, but light rain fell in many localities on the 11-12th. There were also light and widely scattered showers on the 24th and 25th.

UNIVERSITY OF ILLINOIS LIBRARY
NOV 8 1922

WIND.

The average wind velocity at Parkersburg was 3.5 miles per hour, or 0.8 mile below the September average for 32 years. The average at Elkins was 3.0 miles per hour, or 0.1 mile above the September average for 23 years.—The highest velocity at Parkersburg was 18 miles per hour from the northwest on the 24th, and at Elkins 26 miles per hour from the northwest on the 11th.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 77 per cent of the possible amount, or 19 per cent above the September average for 25 years. The average at Elkins was 69 per cent, or 16 per cent above the September average for 23 years.

MISCELLANEOUS PHENOMENA.

Frost, light: Bayard, 18th; Davis, 13th and 22d; Buckhannon, Cairo, Fairmont, Moundsville, Lost Creek, Philippi, Smithfield, and Weston, 26th.

Frost, heavy: Mannington, 26th; New Cumberland, 26th and 27th.

Frost, killing: Brandywine, Burlington, Davis, and Wellsburg, 26th; Cheat Bridge, 25th, 26th, and 27th.

Halo, lunar: Bayard, 2d.

Thunderstorms (dates and number of stations reporting): 1st, 3; 2d, 11; 3d, 6; 4th, 2; 10th, 3; 11th, 7; 12th, 1; 20th, 1; 24th, 4.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for September, 1922.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

VOL. XXX. PARKERSBURG, W. VA., OCTOBER, 1922. No. 10.

GENERAL SUMMARY.

October averaged slightly warmer than usual and was characterized by exceptionally pleasant and sunshiny weather after the first decade. While the rainfall averaged only one-half an inch below the normal, the conditions were exceptionally droughty during the last half of the month, when light showers were received only on two days. Water was scarce for industrial purposes and river traffic was much impeded, especially below Point Pleasant. Many of the smaller streams were practically dry, causing a great loss of fish. Owing to the lateness of the season, however, not much damage resulted to crops, although pastures were made short and the ground too dry for plowing and seeding. The conditions were exceptionally favorable for outdoor work. The first general killing frost occurred on the 19th, although the temperature fell to the freezing point at a few stations on the 13th.

PRESSURE.

The mean sea-level pressures at Parkersburg and Elkins were 30.06 and 30.08 inches, respectively. The highest and lowest readings observed were as follows: Parkersburg, 30.48 inches on the 13th, and 29.60 inches on the 8th. Elkins, 30.52 inches on the 13th, and 29.60 inches on the 8th.

TEMPERATURE.

The monthly mean for the State, determined from 44 stations, was 55.4°. The departure from the normal for 38 stations having ten or more years of record was +0.5°. The temperature was above the normal during the first decade and from the 15th to the 17th and the 28th to the close of the month, the highest readings, ranging generally from 83 to 88°, occurring on the 3d, 4th, 5th, and 6th. Moderately cool weather prevailed from the 11th to the 14th. The early morning temperatures from the 18th to the 22d and from the 24th to the 27th ranged generally from 23° to 36°, with the lowest readings occurring on the 19th, 21st, 27th, and 31st.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 84 per cent; 8 p. m., 73 per cent. The October averages for the same hours for the past 34 years are 83 and 70 per cent, respectively. Elkins, 8 a. m., 90 per cent; 8 p. m., 71 per cent. The October averages for Elkins for the same hours for the past 22 years are 89 and 79 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 65 stations, was 2.45 inches. The departure from the normal for 52 stations having ten or more years of record was —0.50 inch. The greater part of the month's rainfall was received from daily showers from the 7th to the 11th. However, light showers fell in most localities on the 17th and moderate showers on the 23d. A trace of snow fell at Davis on the 24th.

WIND.

The average wind velocity at Parkersburg was 4.1 miles per hour, or 0.8 mile below the October average for 32 years. The average at Elkins was 3.9 miles per hour, or 0.4 mile above the October average for 23 years. The highest velocity at Parkersburg was 24 miles per hour from the south on the 23d, and at Elkins 24 miles per hour from the northwest on the 23d.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 69 per cent of the possible amount, or 19 per cent above the October average for 25 years. The average at Elkins was 58 per cent, or 11 per cent above the October average for 23 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Buckhannon, 11th; Cairo, 12th; Elkins, 1st, 2d, 4th, 13th, 21st, and 30th; Glenville, 1st to the 5th; Hinton, 3d, 5th, 13th, 16th, 25th, and 30th; Hoult, 1st to the 5th, 13th and 14th, 19th to the 22d, and 28th to the 30th; Huntington, 3d and 13th; Mannington, 2d, 4th, 5th, and 29th; Moundsville, 30th; New Cumberland, 13th and 14th; Parkersburg, 2d, 4th, and 13th; Point Pleasant, 2d, 18th, 19th, 20th, and 21st; Romney, 21st to the 23d, and 29th to the 31st; Smithfield, 1st to the 5th, 12th, 14th, and 18th; Wheeling, 1st to the 6th, 13th and 14th, 19th to the 22d, and 28th to the 30th.

Haze, light: Bayard, 1st; Cairo, 13th; Lost Creek, 28th, 29th, 30th, and 31st; Parkersburg, 2d, 3d, 4th, and 5th.

Halos, lunar: Bayard, 5th; Ryan, 6th; Wheeling, 31st.

Halos, solar: Elkins, 6th; Wheeling, 30th.

Thunderstorms (dates and number of stations reporting): 7th, 6; 9th, 1; 23d, 4.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for October, 1922.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

VOL. XXX. PARKERSBURG, W. VA., NOVEMBER, 1922. No. 11.

GENERAL SUMMARY.

The dry, moderately warm, and pleasant weather during September and October continued until the last decade in November, completing one of the longest dry and pleasantest fall seasons of State record. The temperature was considerably below the normal during the last decade, except the 30th, and light snow or snow flurries occurred in most sections from the 25th to the 28th. Streams were unusually low and stagnant and water was scarce for industrial purposes. The conditions were exceptionally favorable for outdoor work and corn husking was practically completed before the end of the month. The stand of winter wheat was generally unsatisfactory, however, owing to the lack of precipitation.

PRESSURE.

The mean sea-level pressures at Parkersburg and Elkins were 0.17 and 30.18 inches, respectively. The highest and lowest eadings observed were as follows: Parkersburg, 30.51 inches n the 10th, and 29.62 inches on the 27th. Elkins, 30.53 nches on the 10th, and 29.58 inches on the 27th.

TEMPERATURE.

The monthly mean for the State, determined from 43 stations, as 43.8°. The departure from the normal for 40 stations hav- ig ten or more years of record was +1.1°. The tempera- ire was considerably above the normal from the 1st to the 8th, 1th to the 15th, 17th to the 19th, and on the 30th, the highest adings occurring generally on the 1st and 2d. From the 24th the 29th the temperature averaged nearly 10° below the ormal, with the lowest readings occurring mostly on the 29th.

HUMIDITY.

The averages of the humidity readings at Parkersburg and lkins at 8 a. m. and 8 p. m., with the normals, were follows: Parkersburg, 8 a. m., 76 per cent; 8 p. m., 66 r cent. The November averages for the same hours for the st 34 years are 81 and 72 per cent, respectively. Elkins, 8 m., 86 per cent; 8 p. m., 76 per cent. The November aver- es for Elkins for the same hours for the past 22 years are 84 d 73 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 67 tions, was 1.15 inches. The departure from the normal for stations having ten or more years of record was —1.40 inches. st of the month's rainfall was received on the 6-7th, 15th, d 18-19th, the greatest amounts falling on the 15th and 18th. ow flurries or light snow occurred daily in many sections from 24th to the 28th, the amounts for that period ranging erally from a trace to 7 inches. At a few of the more vated stations snow flurries also occurred on the 8th and 9th.

WIND.

The average wind velocity at Parkersburg was 5.6 miles per ır, or 0.4 mile below the November average for 32 years. The average at Elkins was 5.3 miles per hour, or 0.9 mile above the November average for 23 years. The highest velocity at Parkersburg was 29 miles per hour from the northwest on the 23d, and at Elkins 30 miles per hour from the west on the 24th.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 45 per cent of the possible amount, or 9 per cent above the November average for 25 years. The average at Elkins was 42 per cent, or 3 per cent above the November average for 23 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Bancroft, 5th, 6th, 10th, 17th, and 19th; Cairo, 7th; Charleston, 1st, 4th, 5th, 7th, 10th, 12th, 13th, 14th, and 19th; Creston, 5th, 7th, 12th, and 19th; Davis, 3d: Elkins, 4th, 5th, 6th, 10th, and 14th; Hinton, 5th, 6th, 8th, 10th, 11th, 12th, 19th, and 30th; Mannington, 5th, 7th, and 19th; New Cumberland, 1st and 5th; Parkersburg, 19th; Pickens, 9th and 20th: Pt. Pleasant, 10th, 11th, and 17th; St. Marys, 1st, 17th, and 19th; Wheeling, 1st, 5th, 10th, 11th, 14th, 17th, and 19th

Halos, lunar: Pickens, 30th; Wheeling, 2d.

Haze, light: Bayard, 1st; Lost Creek, 1st to the 6th, and 10th to the 14th; Terra Alta, 1st, and the 11th to the 14th.

Smoke, light: Mannington, 11th to the 14th; Parkersburg, 1st, 2d, 6th, and the 11th to the 14th; Stony River Dam, 13th; Terra Alta, 1st, 11th, and 12th.

Thunderstorm: Elkins, 15th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section or division means.

Reference letters ^{a}, ^{b}, ^{c} appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for November, 1922.

§ Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

UNIVERSITY OF ILLINOIS LIBRARY
JAN 29 1923

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXX. Parkersburg, W. Va., December, 1922. No. 12.

GENERAL SUMMARY.

The average temperature for December, 36.6°, was considerably above the normal, and is the highest December State average since 1918, except in 1921, when the December average was 37.0°. The cold periods were of short duration, and a temperature of zero or below was not recorded. Although the precipitation averaged well above the normal and was fairly well distributed over the State and throughout the month, the conditions were generally somewhat droughty and the rivers and streams low during most of the month, owing to the continued dry weather during September, October, and November. The snowfall averaged about one-half the normal, and was especially light in the mountain regions, when compared with previous snow records for December. The month was favorable for outdoor work and for stock, but winter grains were somewhat injured by lack of snow cover during periods of freezing weather.

PRESSURE.

The mean sea-level pressures at Parkersburg and Elkins were 30.16 and 30.17 inches, respectively. The highest and lowest readings observed were as follows: Parkersburg, 30.64 inches on the 18th, and 29.42 inches on the 28th. Elkins, 30.61 inches on the 13th, and 29.43 inches on the 28th

TEMPERATURE.

The monthly mean for the State, determined from 45 stations, was 36.6°. The departure from the normal for 39 stations having ten or more years of record was +3.2°. The temperature was considerably above the normal from the 1st to the 5th, on the 7-8th, from the 23d to the 28th, and on the 30th, the highest readings occurring on the 8th. The coldest weather prevailed on the 10-11th, 13th, 18-20th, and 30th, the lowest temperatures occurring generally on the 13th, 19th, and 30th.

HUMIDITY.

The averages of the humidity readings at Parkersburg and lkins at 8 a. m. and 8 p. m., with the normals, were s follows: Parkersburg, 8 a. m., 75 per cent; 8 p. m., 72 er cent. The December averages for the same hours for the ast 33 years are 82 and 76 per cent, respectively. Elkins, 8 . m., 85 per cent; 8 p. m., 77 per cent. The December averges for Elkins for the same hours for the past 22 years are 86 nd 79 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 68 tations, was 4.71 inches. The departure from the normal for 5 stations having ten or more years of record was +1.23 inches. he precipitation was lightest over the eastern panhandle and orthern counties, and heaviest over the central and southern ounties. Most of the precipitation was received on the 4-5th, -10th, 14-15th, 17-18th, and 28-29th, the greatest amounts being measured on the 5th, 8th, and 17th. Light to moderate ow, the amounts ranging from a trace to about 6 inches for ch storm, fell on the 9-10th and 28-29th. In some of the ore elevated localities light snow also fell from the 14th to the th.

The average wind velocity at Parkersburg was 5.2 miles per hour, or 0.9 mile below the December average for 32 years. The average at Elkins was 5.5 miles per hour, or 0.6 mile above the December average for 23 years. The highest velocity at Parkersburg was 33 miles per hour from the west on the 5th, and at Elkins 29 miles per hour from the northwest on the 5th.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 37 per cent of the possible amount, or 10 per cent above the December average for 25 years. The average at Elkins was 47 per cent, or 17 per cent above the December average for 23 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Bancroft, 24th and 27th; Charleston, 4th, 23d, 27th, and 30th; Davis, 12th and 22d; Elkins, 27th; Fairmont, 4th, 27th, and 28th; Hinton, 21st, 24th, 26th, and 27th; Moundsville, 27th; New Cumberland, 21st and 27th; Organ Cave, 8th and 9th; Pickens, 15th and 28th; Piedmont, 14th; Terra Alta, 15th, 16th, 17th, and 28th; Wheeling, 27th.

Halos, lunar: Bayard, 27th; Burlington, 30th; Elkins, 6th and 25th; Parkersburg, 25th; Pickens, 26th; Ryan, 26th.

Halo, solar: Ryan, 30th.

Sleet: Bayard, 9th, 10th, 13th, 14th, and 30th; Bruceton Mills, 14th; Cheat Bridge, 23d; Davis, 16th; Fairmont, 15th; Moundsville, 14th; Parkersburg, 14th and 16th; Smithfield, 14th; Terra Alta, 16th, 17th, and 18th; Union, 14th; Wheeling, 14th.

Thunderstorms (dates and number of stations reporting): 8th, 12; 9th, 4; 14th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for December, 1922.

§ Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

NWE

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXX. PARKERSBURG, W. VA., YEAR, 1922. No. 13.

GENERAL SUMMARY.

The year was much warmer and somewhat drier than usual.

Although the years of 1898, 1911, and 1921 averaged warmer, the past year was characterized by an exceptionally favorable temperature distribution for comfort and outdoor work. January was cold, the temperature for February, March, April, May, and June averaged above the normal, while July and August were favorably cool. The last four months were warmer than usual.

The precipitation was unfavorably distributed for excellent growth. March, June, and December were wet, but the other months were dry. Over the eastern panhandle counties the precipitation was deficient after March, and the conditions were generally exceptionally droughty, causing much damage to crops.

The season of growth was ample for the ripening of all crops, xtending generally from April 30 to October 13; but, owing to he warm weather in March and April, which developed fruit bloom, the frosts in April caused great damage to fruit.

The average cloudiness was considerably below the normal. The sunshine at Parkersburg averaged 55 per cent of the possible amount, or 9 per cent above the normal. The average at Elkins was 50 per cent, or 6 per cent above the normal.

The wind movement at Parkersburg was 45,046 miles and at Elkins, 42,558 miles.

THE WEATHER BY MONTHS.

JANUARY.—January averaged somewhat colder and much drier than usual. The snowfall was heavy over the eastern ounties on the 11-12th. The sunshine was abundant, the per ent of the possible amount being the greatest of January State ecord over the western counties. The conditions were favorable or outdoor work, winter grains, and transportation.

FEBRUARY.—February was nearly continuously warm, moderely cold weather prevailing on only two or three days. The recipitation was slightly below the normal and the snowfall as light, especially over the western counties. There was a ght snow-cover during the coldest period of the month. The eather was favorable for outdoor work and winter grains.

MARCH.—March was much wetter and considerably warmer an usual, but the snowfall was below the normal and nimportant in the agricultural districts. The outlook for uit was favorable at the close of the month. Wheat made od growth, but plowing was delayed by wet weather.

APRIL.—April was also warm until the last decade, causing rapid growth and the development of fruit buds and bloom. Killing frosts on the 22d, 23d, and 24th, and in some of the more elevated localities on the 29th and 30th, caused great damage to fruit, especially in low orchards. Heavy rain on the 14-15th over the central and western counties caused marked rises in the rivers.

MAY.—May averaged slightly warmer and drier than usual. Heavy to killing frosts occurred in the more elevated localities on the 1st and in a few of the mountain sections on the 15th and 29th, causing some damage to fruit. Owing to the periods of cold weather, there were many complaints of fruit dropping.

(Continued on page 51.)

THE WEATHER BY MONTHS.

(Continued from page 49.)

Potatoes, oats, meadows, and pastures made excellent growth.

JUNE.—June was warm and wet, with the rainfall unfavorably distributed. Excessive rain fell in sections of Pocahontas and Wetzel Counties, and in localities of the west-central counties, causing floods in the smaller streams and much damage to crops. The streams were especially high in Jackson and Roane Counties on the 11th, causing considerable damage to roads and bridges. In most localities crops made good growth during the month.

JULY.—While the conditions were decidedly droughty in most localities of the northern and eastern counties during July, frequent rains in the central and southern counties delayed harvesting and caused damage to hay and shocked grains. The temperature was especially favorable for growth and comfort. At the close of the month corn was growing rapidly, oats were harvested, and haying well advanced.

AUGUST.—August was decidedly cool, the lowest temperature of August State record occurring at several stations on the 21st, when some damage resulted to buckwheat. Excessive rain fell over the central-western counties, causing considerable damage to corn, while droughty conditions continued over the eastern and northern counties. Most of the rainfall was received during the first and last decades.

SEPTEMBER.—September was exceptionally sunshiny and nearly continuously warm. Practically all the month's rainfall was received on the 2-3d, and a severe drought set in near the close of the first decade. Owing to the lateness of the season, however, not much damage resulted to crops, and the conditions were favorable for harvesting, thrashing, and the ripening of corn. There was no frost damage in the agricultural districts.

OCTOBER.—October was characterized by exceptionally pleasant and sunshiny weather after the first decade, but the conditions were especially droughty after the 15th. Many of the smaller streams became practically dry, causing a great loss of fish. The first general killing frost occurred on the 19th, although the temperature fell to the freezing point at a number of stations on

THE WEATHER BY MONTHS.

(Continued from page 51.)

the 13th.

NOVEMBER.—The dry, moderately warm, and pleasant weather during September and October continued until the last decade in November. The temperature was below the normal during the last decade, except the 30th. Streams were low and stagnant and water was scarce for industrial purposes. The conditions were favorable for outdoor work.

DECEMBER.—December averaged warm and wet. The co periods were of short duration and a temperature of zero or belo was not recorded. The snowfall averaged about one-half t normal. The weather was especially favorable for outdoor wo and stock, but winter grains were somewhat injured by lack snow-cover during periods of freezing temperature.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXXI. Parkersburg, W. Va., January, 1923. No. 1.

MAR 17 1923

GENERAL SUMMARY.

January was warm, generally cloudy, and rainy, with an unusually light snowfall. The temperature was nearly continuously above the normal, moderately cold weather prevailing during only two or three short periods. A temperature of zero or below occurred at only one station. The precipitation was favorably distributed, but the snowfall in the western and southern counties was unimportant. The weather was especially favorable for outdoor work and the wintering of stock; but frequent rains and alternating periods of freezing and thawing weather were somewhat unfavorable for winter wheat, the ground being practically bare during the entire month in most of the agricultural districts. The rivers were not near flood stages, although the general rains of the 21st-22d and 27-28th caused moderate stages, especially in the smaller streams.

PRESSURE.

The mean sea-level pressures at Parkersburg and Elkins were 30.11 and 30.12 inches, respectively. The highest and lowest readings observed were as follows: Parkersburg, 30.74 inches on the 22d, and 29.57 inches on the 7th. Elkins, 30.70 inches on the 23d, and 29.60 inches on the 8th.

TEMPERATURE.

The monthly mean for the State, determined from 47 stations, was 35.2°. The departure from the normal for 40 stations having ten or more years of record was +3.0°. The temperature averaged considerably above the normal from the 1st to the 3d, 5th to the 9th, 13th to the 15th, 18th to the 21st, and from the 24th to the close of the month, with the highest reading occurring generally on the 18th and 21st. The averages were somewhat below the normal on the 10th, 16-17th, and 23d, with the lowest readings occurring at nearly all stations on the 17th.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 74 per cent; 8 p. m., 76 per cent. The January averages for the same hours for the past 34 years are 83 and 77 per cent, respectively. Elkins, 8 a. m., 80 per cent; 8 p. m., 73 per cent. The January averages for Elkins for the same hours for the past 22 years are 85 and 78 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 70 stations, was 4.46 inches. The departure from the normal for 45 stations having ten or more years of record was +0.64 inch. The precipitation was heaviest over the central and southern counties, and lightest over the eastern panhandle section. The greater portion of the rainfall was received on the 1st, 3d, 8-9th, 14-15th, 21st-23d, 24th, and 27-28th, the greatest amounts being recorded on the 8th, 15th, 21st, 24th, and 28th. Light snow or snow flurries occurred in most sections on the 3d-4th, 8-10th, and 15-16th. On the 22d the snowfall over the eastern panhandle counties was moderately heavy, but over most other localities the amounts were light.

WIND.

The average wind velocity at Parkersburg was 7.2 miles per hour, or 0.6 mile [illegible] the January average for 33 years. The average at Elkins was 7.2 miles per hour, or 2.1 miles above the January average for 23 years. The highest velocity at Parkersburg was 32 miles per hour from the northwest on the 14th, and at Elkins 32 miles per hour from the west on the 11th.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 24 per cent of the possible amount, or 4 per cent above the January average for 25 years. The average at Elkins was 26 per cent, or 3 per cent above the January average for 22 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Bens Run, 31st; Bruceton Mills, 3d, 27th, 28th, 29th, and 31st; Charleston, 20th; Davis, 8th, 27th, and 31st; Elkins, 11th; Hinton, 11th; Lewisburg, 27th; Mannington, 31st; Pickens, 9th; Stony River Dam, 1st, 7th, 28th, and 30th; Wheeling, 2d and 20th.

Halos, lunar: Bayard, 3d; Burlington, 2d and 29th; Elkins, 2d and 29th; Pickens, 2d; Wellsburg, 29th.

Halos, solar: Bayard, 2d; Ryan, 29th.

Sleet: Bancroft, 23d; Bayard, 3d, 6th, 24th, and 31st; Davis 2d and 24th; Elkins, 23d and 24th; Gary, 24th; Inwood, 24th; Lewisburg, 23d; Marlinton, 14th, 20th, and 23d; Pickens, 24th; Ryan, 23d and 24th; Terra Alta, 24th, 25th, and 28th; Smithfield, 14th; Union, 23d and 24th.

Thunderstorms: Bancroft and Williamson, 7th; Bens Run, 8th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, [a], [b], [c] appearing in the table indicate number of days missing; for example, [b] represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for January, 1923.

§ Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

VOL. XXXI. PARKERSBURG, W. VA., FEBRUARY, 1923. No. 2.

GENERAL SUMMARY.

The temperature for February was considerably below the normal and the precipitation was somewhat in excess, and the month was characterized by nearly continuously cool weather after the 3d and by much cloudiness. The snowfall, however, was slightly below the February average and the ground was practically bare in the agricultural districts most of the month, the conditions being generally unfavorable for winter grains, which were only in fair condition at the close of the month. The rivers were at low or moderate stages, and boating was impeded on the Ohio River by light to moderately heavy running ice from the 17th to the 24th.

PRESSURE.

The mean sea-level pressures at Parkersburg and Elkins were 30.22 and 30.20 inches, respectively. The highest and lowest readings observed were as follows: Parkersburg, 30.70 inches on the 15th, and 29.67 inches on the 3d. Elkins, 30.59 inches on the 24th, and 29.64 inches on the 13th.

TEMPERATURE.

The monthly mean for the State, determined from 48 stations, was 30.4°. The departure from the normal for 41 stations having ten or more years of record was −1.5°. The month opened warm and the temperature was also considerably above the normal on the 8-9th, 13th, and 25-26th, with the highest readings occurring at practically all stations on the 13th. The cold periods were from the 4th to the 7th, and the 14th to the 25th, with the lowest temperatures occurring generally on the 18th and 24th.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 80 per cent; 8 p. m., 70 per cent. The February averages for the same hours for the past 34 years are 82 and 76 per cent, respectively. Elkins, 8 a. m., 84 per cent; 8 p. m., 82 per cent. The February averages for Elkins for the same hours for the past 22 years are 84 and 74 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 69 stations, was 3.68 inches. The departure from the normal for 46 stations having ten or more years of record was +0.70 inch. The precipitation was heaviest over the central counties and lightest over the eastern panhandle section. Most of the precipitation was received from the 1st to the 3d and on the 10-11th, 12-13th, and 26-27th, but light precipitation also occurred in most localities on the 6-7th, 17-18th, 20th, and 23d. The greatest amounts were measured on the 1st and 13th. Light to moderate snow was received in most sections on the 6-7th, 10-11th, 17-18th, 19-20th, and 22d-23d. The snowfall was heaviest on the 10th and during the night of the 19-20th.

WIND.

The average wind velocity at Parkersburg was 7.4 miles per hour, or 0.1 mile above the February average for 33 years. The average at Elkins was 7.4 miles per hour, or 1.7 miles above the February average for 24 years. The highest velocity at Parkersburg was 38 miles per hour from the northwest on the 14th, and at Elkins 40 miles per hour from the west on the 14th.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 34 per cent of the possible amount, or 2 per cent below the February average for 25 years. The average at Elkins was 29 per cent, or 6 per cent below the February average for 23 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Bancroft, 27th; Bayard, 1st, 2d, 26th, 27th, and 28th; Buckhannon, 27th; Charleston, 9th; Davis, 2d, 27th, and 28th; Hinton, 27th; Lewisburg, 26th and 27th; New Cumberland, 1st, 2d, and 27th; Philippi, 27th and 28th; Pickens, 27th and 28th; Romney, 13th and 27th; Terra Alta, 1st, 2d, 25th, 26th, 27th, and 28th; Wellsburg, 1st; Wheeling, 12th, 21st, and 24th.

Halo, lunar: Bayard, 1st.

Halo, solar: Ryan, 19th.

Sleet: Bancroft, 10th; Bayard, 7th; Beckley, 5th; Marlinton, 12th; Stony River Dam, 3d and 5th; Terra Alta, 6th, 13th, 24th, and 28th; Union, 6th.

Thunderstorm: Ryan, 2d.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, [a], [b], [c] appearing in the table indicate number of days missing; for example, [b] represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for February, 1923.

§ Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

UNIVERSITY OF ILLINOIS LIBRARY

1923

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

VOL. XXXI. PARKERSBURG, W. VA., MARCH, 1923. No. 3.

GENERAL SUMMARY.

March was slightly cooler and considerably drier than usual, with ample sunshine. The month was generally considered much cooler than usual, as March was warm for the five years preceding 1923. For the past month, also, the warm period occurred at the beginning of the month. At several of the stations, including Elkins and Parkersburg, the temperature averaged practically normal. The precipitation was generally favorably distributed, although the monthly amounts were much deficient over the eastern counties. The snowfall was light Over the southern and western counties the ground was practically bare during the entire month. Owing to light snow-cover, light to moderate rains, and cool nights, the rivers in the district were only at moderate stages. The temperature conditions were excellent for fruit trees, as fruit buds were practically dormant at the close of the month. Low temperature during the last two decades, however, delayed farm work and caused some damage to wheat.

PRESSURE.

The mean sea-level pressures at Parkersburg and Elkins were 30.09 and 30.08 inches, respectively. The highest and lowest readings observed were as follows: Parkersburg, 30.62 inches on the 31st, and 29.26 inches on the 6th. Elkins, 30.57 inches on the 14th, and 29.17 inches on the 7th.

TEMPERATURE.

The monthly mean for the State, determined from 48 stations, was 41.7°. The departure from the normal for 40 stations having ten or more years of record was −0.8°. Moderately warm weather prevailed from the 1st to the 5th and on the 12-13th and 22-23d, with the highest temperature occurring generally on the 12th. Unseasonably cool weather prevailed on the 7-9th, 19-20th, and during the last four days, with the lowest temperatures occurring generally on the 20th, 29th, and 31st.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 75 per cent; 8 p. m., 56 per cent. The March averages for the same hours for the past 34 years are 79 and 69 per cent, respectively. Elkins, 8 a. m., 80 per cent; 8 p. m., 60 per cent. The March averages for Elkins for the same hours for the past 23 years are 82 and 69 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 69 stations, was 3.23 inches. The departure from the normal for 45 stations having ten or more years of record was —0.61 inch. The precipitation was heaviest over the central and southern counties and lightest over the eastern panhandle. Most of the precipitation was received on the 6-7th, 10-12th, 16th, 19th, and 22-23d, the greatest amounts being measured on the 6th, 12th, and 23d. Most of the snowfall was received on the 6th, 14th, 16th, and 19th, the amounts ranging from a trace at some of the stations in the southern counties to 20 inches at Pickens, Randolph County.

WIND.

The average wind velocity at Parkersburg was 8.8 miles per hour, or 1.6 miles above the March average for 34 years. The average at Elkins was 9.0 miles per hour, or 3.2 miles above the March average for 24 years. The highest velocity at Parkersburg was 43 miles per hour from the west on the 4th, and at Elkins 41 miles per hour from the southwest on the 12th.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 55 per cent of the possible amount, or 13 per cent above the March average for 25 years. The average at Elkins was 53 per cent, or 13 per cent above the March average for 24 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Bayard, 18th and 22d; Hinton, 3d and 18th; Pickens, 5th; Wheeling, 8th and 11th.

Hail: Davis and Wheeling, 26th.

Halos, lunar: Burlington, 2d; Bayard and Wellsburg, 3d, Williamson, 9th; Wheeling, 16th; Elkins, 25th.

Halo, solar: Cairo, 9th.

Sleet: Brandywine, Cheat Bridge, Inwood, Romney, Smithfield, and Wardensville, 6th; Bayard and Fairmont, 7th; Elkins, 13th; Romney, 16th; Wellsburg, 26th.

Thunderstorms (dates and number of stations reporting): 11th, 1; 12th, 1; 22d, 2; 23d, 1; 24th, 1; 26th, 3.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for March, 1923.

§ Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXXI. Parkersburg, W. Va., April, 1923. No. 4.

GENERAL SUMMARY.

April was characterized by nearly continuously cool weather, with the amount of sunshine considerably above the normal. It was the coolest April of State record since 1911, except in 1920. The lowest temperature of April State record, 4° below zero, occurred on the 1st. Owing to the lateness of the season, about 12 days, and to the favorable conditions for fruit during March, this cold weather caused but little damage, except in the extreme eastern counties, where peach, plum and pear bloom was killed in some localities. The amount of sunshine received was exceeded in only three Aprils of State record. The rainfall was only slightly below the April average and was favorably distributed over the State and throughout the month. The snowfall was unimportant and was mostly confined to the extreme northern portion of the State. At the close of the month the seeding of oats was practically completed, potato planting was well advanced, and the ground was being prepared for corn. Wheat was only in fair to poor condition, having been damaged by low temperatures.

PRESSURE.

The mean sea-level pressure at Parkersburg and Elkins was 30.02 inches. The highest and lowest readings observed were as follows: Parkersburg, 30.71 inches on the 1st, and 29.54 inches on the 5th. Elkins, 30.71 inches on the 1st, and 29.48 inches on the 28th.

TEMPERATURE.

The monthly mean for the State, determined from 49 stations, was 50.1°. The departure from the normal for 42 stations having ten or more years of record was —1.2°. The month opened exceptionally cold for the season, the lowest temperatures on the 1st ranging generally from near zero to about 15° above zero. Moderately cold weather also prevailed from the 9th to the 12th, 15th to the 19th, and the 24th to the 26th. The highest temperature occurred on the 3d-4th, 20th-22d, and 27th, with the highest for the month on the 21st and 27th.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 71 per cent; 8 p. m., 50 per cent. The April averages for the same hours for the past 34 years are 75 and 62 per cent, respectively. Elkins, 8 a. m., 72 per cent; 8 p. m., 55 per cent. The April averages for Elkins for the same hours for the past 23 years are 79 and 64 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 72 stations, was 3.45 inches. The departure from the normal for 50 stations having ten or more years of record was —0.10 inch. The rainfall was heaviest over the central-western counties and lightest over the extreme eastern. Practically all the rainfall was received from the 3d to the 6th, 13th to the 15th, and on the 28th, the greatest amounts being measured on the 13th and 28th. There were scattered light showers on the 8th, 21st, and 22d. Snow flurries or light snow occurred in many localities of the extreme northern counties on the 5th, 8th, and 14-15th.

AUG 1 1923

HAIL.

Light hail fell in sections of Randolph, Ritchie, and Webster Counties on the 5th. No damage resulted.

WIND.

The average wind velocity at Parkersburg was 6.7 miles per hour, or 0.1 mile below the April average for 33 years. The average at Elkins was 6.9 miles per hour, or 1.7 miles above the April average for 23 years. The highest velocity at Parkersburg was 30 miles per hour from the west on the 22d, and at Elkins 31 miles per hour from the west on the 22d.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 59 per cent of the possible amount, or 12 per cent above the April average for 25 years. The average at Elkins was 61 per cent, or 17 per cent above the April average for 24 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Bancroft, 11th, 18th, and 29th; Charleston, 20th; Davis, 8th; Marlinton, 29th; Rowlesburg, 7th, 11th, 24th, and 27th; Smithfield, 17th; Wheeling, 7th, 21st, and 27th; Terra Alta, 15th.

Hail: Cairo, Camden-on-Gauley, and Cheat Bridge, 5th.

Halo, lunar: Wheeling, 30th.

Halos, solar: Burlington and Ryan, 26th; Terra Alta, 3d and 7th.

Haze, light: Bayard, 21st, 24th, 27th, and 30th; Terra Alta, 25th, 26th, and 27th.

Sleet: Terra Alta, 13th; Bayard, Cheat Bridge, Davis, Marlinton, Stony River Dam, and Terra Alta, 14th.

Smoke, light: Pickens, 27th.

Thunderstorms (dates and number of stations reporting): 4th, 5; 5th, 12; 6th, 2; 13th, 1; 21st, 6; 28th, 5; 29th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for April, 1923.

§ Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXXI. Parkersburg, W. Va., May, 1923. No. 5.

GENERAL SUMMARY.

May averaged considerably cooler and much drier than usual, and the month was characterized by unusually low May temperatures on the 9-11th, and by light to heavy snow or snow squalls from the early morning until into the night of the 9th. Cool weather also prevailed from the 11th to the 25th, except on the 15th and 19th. The lowest temperatures on the 9th, 10th, and 11th ranged generally from 30° to 35°, but a temperature of 29° or lower occurred at 22 stations. The midday temperatures on the 9th were also the lowest of May State record. While the snow melted practically as fast as it fell in most localities, amounts from 4 to 10 inches were measured in many of the more elevated sections. The storm, considering both the amount of snowfall and the duration of the fall, was probably the most severe and disagreeable of May State record. The following remarks by Dr. J. L. Cunningham, Cooperative Observer at Pickens, well describes the conditions in the central portion of the State:

> "May 9 was the most blustering day of the winter. Snow began to fall about daybreak and snow and high winds continued all day. The temperature at 7 a. m. was 25 degrees, at noon 27 degrees, and at 8 p. m. 25 degrees. The weather cleared during the night. On the morning of May 10 the snow on the lawn was 6 inches deep and drifts on the walks were from 10 to 12 inches deep. Icicles from 22 to 35 inches long hung from the eaves of the roof. Snow on sidewalks 9 inches deep; drifts on the mountains from 3 to 4 feet deep."

The precipitation was fairly well distributed over the State, except the eastern panhandle section, where the amounts were especially light. The last week was droughty. Owing to continued cool weather germination and growth were much retarded. Fruit was also much damaged in many localities. At the close of the month pastures, meadows, wheat, and oats were generally in fair to poor condition.

PRESSURE.

The mean sea-level pressures at Parkersburg and Elkins were 29.95 and 29.94 inches, respectively. The highest and lowest readings observed were as follows: Parkersburg, 30.23 inches on the 24th, and 29.49 inches on the 12th. Elkins, 30.26 inches on the 18th, and 29.51 inches on the 16th.

TEMPERATURE.

The monthly mean for the State, determined from 47 stations, was 59.7°. The departure from the normal for 42 stations having ten or more years of record was —2.2°. The first week was favorably warm and the temperature was considerably above the normal on the 15th, 28th, and 29th. The temperature was especially low for the season on the 9-11th and generally below the normal from the 11th to the 15th and the 16th to the 25th.

HUMIDITY.

The averages of the humidity readings at Parkersburg and Elkins at 8 a. m. and 8 p. m., with the normals, were as follows: Parkersburg, 8 a. m., 65 per cent; 8 p. m., 55 per cent. The May averages for the same hours for the past 33 years are 75 and 64 per cent, respectively. Elkins, 8 a. m., 76 per cent; 8 p. m., 60 per cent. The May averages for Elkins for the same hours for the past 22 years are 79 and 64 per cent, respectively.

PRECIPITATION.

The average precipitation for the State, determined from 70 stations, was 2.58 inches. The departure from the normal for 48 stations having ten or more years of record was —1.30 inches. The precipitation was heaviest over the northern panhandle section and lightest over the eastern panhandle section. Precipitation was general on the 8-10th, 12-13th, 16th, and 20th-21st, the amounts on the 9-10th being received mostly as snow. There were also scattered showers on the 23d and 28th.

HAIL.

Light hail fell on the 8th in sections of Fayette, Hampshire, Putnam, and Roane Counties.

WIND.

The average wind velocity at Parkersburg was 5.4 miles per hour, or 0.1 mile below the May average for 33 years. The average at Elkins was 5.8 miles per hour, or 1.6 miles above the May average for 22 years. The highest velocity at Parkersburg was 36 miles per hour from the northwest on the 8th, and at Elkins 31 miles per hour from the southwest on the 16th.

SUNSHINE AND CLOUDINESS.

At Parkersburg the sunshine averaged 59 per cent of the possible amount, or 5 per cent above the May average for 25 years. The average at Elkins was 62 per cent, or 4 per cent above the May average for 24 years.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Bancroft, 27th; Elkins, 19th and 22d; Hinton, 22d, 27th, and 30th; Mannington, 18th, 22d, and 31st; Marlinton, 7th, 17th, 18th, 19th, 22d, 24th, 25th, and 27th; Moundsville, 22d, 23d, and 24th; Terra Alta, 31st; Wardensville, 22d; Wheeling, 18th and 29th.

Halo, lunar: Terra Alta, 5th.

Halos, solar: Terra Alta, 7th, 9th, and 22d.

Haze, light: Bayard, 5th, and 17th; Philippi, 26th to the 30th.

Smoke, light: Pickens, 5th and 6th.

Thunderstorms (dates and number of stations reporting): 5th, 1; 6th, 1; 8th, 10; 9th, 1; 11th, 1; 12th, 6; 15th, 4; 20th, 3; 22d, 1; 23d, 1; 26th, 1; 27th, 1; 28th, 1; 29th, 2.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used i determining section or division means.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for May, 1923.

§ Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXXI. Parkersburg, W. Va., June, 1923. No. 6.

GENERAL SUMMARY.

June averaged somewhat warmer and slightly wetter than usual and the month was characterized by high temperature during the first week and from the 18th to the 25th, and by frequent thunderstorms and an unfavorable rainfall distribution. The rainfall was much deficient over the eastern counties, where the conditions were decidedly droughty, while heavy rain fell over the central and central-western counties. Excessive rain on the 12th in the southeastern portion of Wyoming County, and on the 24th in the west-central portion of Brooke County, caused high water in the local streams, doing some damage. Crops made good growth during the month, except during the beginning of the last decade, when rain was much needed.

TEMPERATURE.

The monthly mean for the State, determined from 47 stations, was 70.2°. The departure from the normal for 41 stations having ten or more years of record was +1.3°. The highest temperatures occurred mostly on the 5th and 22d, and the lowest on the 10th and 30th.

PRECIPITATION.

The average precipitation for the State, determined from 71 stations, was 4.54 inches. The departure from the normal for 47 stations having ten or more years of record was +0.27 inch.

HAIL.

Light hail fell in sections of the following counties on dates indicated: Brooke, Jackson, and Wood, 1st; Berkeley and Randolph, 3d; Jackson, Tucker, and Webster, 7th; Webster, 12th: Brooke, 22d; Taylor, 26th.

Moderately heavy hail, causing some damage, fell over sections of the northern portion of Jefferson County on the 3d.

MISCELLANEOUS PHENOMENA.

(Dates and number of stations reporting.)

Halos, solar: 15th, 1; 21st, 1; 23d, 1; 24th, 1; 27th, 1.

Thunderstorms: 1st, 4; 2d, 2; 3d, 4; 4th, 3; 5th, 8; 6th, 10: 7th, 9; 8th, 4; 11th, 3; 12th, 2; 13th, 1; 15th, 12; 16th, 2; 17th, 2; 18th, 3; 19th, 3; 20th, 1; 21st, 2; 22d, 7; 23d, 9; 24th, 16; 25th, 11; 26th, 11; 27th, 4; 28th, 7; 29th, 1.

EVAPORATION STATION, CLARKSBURG, W. VA.

An evaporation station was established at Clarksburg, W. Va., May 17, 1923. The station is located at the Clarksburg Filtration Plant, which is 2 miles southwest of the city and in latitude 39 degrees 16 minutes Nortn and longitude 80 degrees 20 minutes West. There is an excellent hard road from Clarksburg to the station.

The evaporation tank, with its supplemental instruments, is placed on a low dome-shaped elevation, from which there is an excellent view of the surrounding country, the evaporation tank not being shaded by hills or other high objects in any direction. The West Fork River is 75 feet away to the northwest and is about 200 feet wide at the station. The Filtration Plant is 175 feet away to the north.

The station is a Standard Class A Evaporation Station, which is described in Circular L, Instument Division. The evaporation pan is cylindrical in form, made of galvanized iron, 10 inches deep and 48 inches in diamater, and the water in the pan when full is 8 inches deep. The pan rests on a leveled wooden support 2 inches in height, assuring drainage and air circulation.

Measurements are made by means of a modified form of the Boyden hook gage, which is adjusted by vernier to read to hundredths of inches. The anemometer is mounted on the same framework with the pan, the centers of the cups clearing the rim of the pan by about 1 inch. The ordinary 8-inch rain gage of the Weather Bureau is located 3 feet from the evaporatfon pan. The temperature equipment consists of the Henry J. Green instrument shelter inclosing maximum and minimum thermometers, the floor of the shelter being 4 feet above the ground and the thermometers about 5 feet above.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, ᵃ, ᵇ, ᶜ appearing in the table indicate number of days missing; for example, ᵇ represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for June, 1923.

§ Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXXI. Parkersburg, W. Va., July, 1923. No. 7.

GENERAL SUMMARY.

July averaged somewhat cooler and slightly wetter than usual, and the month was characterized by frequent thunderstorms, attended by heavy rains in many localities of the central and western counties. However, destructive hail storms were not reported. Over the extreme eastern counties the conditions were droughty until near the close of the month, causing considerable damage to meadows and pastures and all crops. Heavy rains over the central and western counties also caused some damage to corn and potatoes. As a rule, however, all crops made favorable growth over the western and central portions of the State. Corn and pastures made excellent growth. Wheat was harvested under generally favorable weather conditions, with fair to good yield. At the close of the month oats were being harvested and haying was well advanced.

TEMPERATURE.

The monthly mean for the State, determined from 54 stations, was 71.7°. The departure from the normal for 46 stations having ten or more years of record was −1.2°. The month opened decidedly cool and the temperature was also somewhat below the normal from the 7th to the 9th, 17th to the 20th, and from the 22d to the 28th. The highest temperatures occurred generally on the 10th, 11th, 12th, and 20th. The temperature was also high on the 5th and 6th.

PRECIPITATION.

The average precipitation for the State, determined from 76 stations, was 4.70 inches. The departure from the normal for 51 stations having ten or more years of record was +0.12 inch. The precipitation was heaviest over the central and western counties and lightest over the eastern panhandle section. Nearly all the precipitation was received on the 6-8th, 11-13th, 16th, 22d-24th, 27-28th, and 30th-31st, the greatest amounts being recorded on the 6-7th, 12-13th, 24th, and 28th. Rainfalls exceeding 2.50 inches in 24 hours occurred as follows: Kanawha Falls, 4.45; Glenville, 3.31; Pickens, 3.25; Saint Marys, 3.20; Weston, 3.00; Point Pleasant, 2.81; Elizabeth, 2.76; Hinton, 2.60 inches.

HAIL.

Light hail fell in sections of the following counties on dates indicated: Berkeley, 22d and 29th. Randolph, 21st. Webster, 24th, 28th, and 30th.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Bancroft, 14th, 15th, 17th, 20th, 21st, and 31st; Elkins, 17th, 19th, 26th, 29th, and 30th; Hinton, 3d, 4th, 11th, 14th, 15th, and 19th; Mannington, 1st, 8th, 10th, 15th, 17th, 18th, 20th, 26th, and 31st; Marlinton, 8th, 9th, 11th, 17th, 19th, 21st, 25th, and 26th; New Cumberland, 1st, 9th, 13th, 14th, 18th, 19th, 20th, 22d, 23d, and 26th; Pt. Pleasant, 20th and 21st; Romney, 14th, 18th, 19th, and 30th; Wheeling, 18th and 19th.

Haze, light: Pickens, 22d.

Thunderstorms (dates and number of stations reporting): 3d, 3; 4th, 1; 5th, 5; 6th, 11; 7th, 5; 10th, 3; 11th, 9; 12th, 11; 13th, 2; 15th, 2; 16th, 9; 21st, 2; 22d, 5; 23d, 1; 24th, 8; 25th, 3; 27th, 4: 28th, 6; 29th, 2; 30th, 11; 31st, 4.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for July, 1923.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXXI. Parkersburg, W. Va., August, 1923. No. 8.

GENERAL SUMMARY.

August averaged somewhat cooler and much wetter than usual, and the month was characterized by heavy and unfavorably distributed rainfall over the central and west-central counties, droughty conditions over the eastern panhandle counties, and unusually low August temperatures early in the last decade. The rainfall for Pickens was 12.42 inches, a total of 8.06 inches being recorded for the three consecutive days ending on the 12th. The rainfall for that period was also excessive in sections of the upper Little Kanawha basin and in portions of Jackson and Wood Counties. The river at Glenville reached a stage of 22.4 feet and the streams in the northern portion of Jackson County were unusually high, causing much damage to corn and hay. Over the eastern panhandle counties the conditions were droughty nearly all the month, although a general rain on the 17th relieved the drought temporarily. The temperature on the 23d-24th fell to near the August State record, and light frosts were observed in sections of the northern mountain region. On the whole, the conditions were favorable for crop growth and pastures, but frequent rains delayed haying and harvesting.

TEMPERATURE.

The monthly mean for the State, determined from 53 stations, was 71.0°. The departure from the normal for 45 stations having ten or more years of record was —0.7°. The temperature was considerably above the average from the 1st to the 12th, and slightly above on the 19th-21st, and from the 27th to the 31st, with the highest temperature occurring generally on the 2d, 7th, and 11th. Cool weather prevailed from the 16th to the 20th, and from the 22d to the 26th, with the lowest readings on the 23d and 24th. The highest monthly mean was 79.2° at Logan, and the lowest was 62.2° at Cheat Bridge. The highest temperature was 99° at Moorefield on the 11th, and the lowest was 33° at Terra Alta on the 23d.

PRECIPITATION.

The average precipitation for the State, determined from 80 stations, was 4.39 inches. The departure from the normal for 51 stations having ten or more years of record was +0.52 inch. Showers occurred in most localities from the 1st to the 10th, 13th, 15th, 19th, 21st, and from the 27th to the 30th. Heavy rain occurred generally in all sections on the 11-12th and 17th, and moderately heavy rain fell at a number of stations on the 22d. The greatest monthly precipitation was 12 42 inches at Pickens, and the least was 1.60 inches at Upper Tract. The greatest amount in any 24 consecutive hours was 3.77 inches at Beckley on the 12th.

HAIL.

Light hail fell in sections of Wirt County on the 12th.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Bayard, 14th, 22d, 23d, 28th, and 29th; Cairo, 18th and 19th; Elkins, 16th, 21st 24th, 30th, and 31st; Hinton, 3d; Marlinton, 8th, 14th to the 16th, 19th to the 21st, 23d to the 28th, 30th, and 31st; New Cumberland, 10th, 11th, and 31st; Romney, 10th, 11th, 14th, 20th, and 30th; Terra Alta, 1st, 2d, 10th, 11th, 16th, 18th, and 24th; Wellsburg, 18th.

Frost, light: Bayard, 24th; Bruceton Mills, 23d, 24th, and 25th.

Halo, lunar: Terra Alta, 27th.

Thunderstorms (dates and number of stations reporting): 1st, 2; 3d, 10; 4th, 10; 5th, 5; 6th, 2; 8th, 14; 9th, 1; 10th, 8; 11th, 2; 12th, 20; 13th, 2; 16th, 1; 18th, 1; 19th, 1; 21st, 3; 22d, 1; 27th, 2; 28th, 5.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for August, 1923.

§ Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

VOL. XXXI. PARKERSBURG, W. VA., SEPTEMBER, 1923. No. 9.

GENERAL SUMMARY.

September averaged somewhat warmer and wetter than usual, with a slight excess in sunshine. Although the month averaged warmer, the week ending on the 17th was the coolest of State record for the middle of September, and the temperatures on the mornings of the 15th and 16th were near the State record for the first and second decades of September, giving light to killing frosts in many localities of the northern and central counties. Freezing temperature was recorded at several stations in the northern mountain counties, where late garden truck was much damaged. There was but little frost damage in other sections of the State. The rainfall was well distributed and ample for all purposes, but there was no rainfall of consequence after the 21st. The conditions were favorable for ripening crops, fall seeding, harvesting, and silo filling.

TEMPERATURE.

The monthly mean for the State, determined from 51 stations, was 66.5°. The departure from the normal for 44 stations having ten or more years of record was +0.8°. Moderately warm weather prevailed from the 1st to the 8th and the temperature was also continuously above the normal from the 18th to the 30th, the highest readings occurring generally on the 1st, 4th, 25th and 26th. The weather was exceptionally cool for the season from the 9th to the 18th, with the lowest readings occurring generally on the 15th and 16th.

PRECIPITATION.

The average precipitation for the State, determined from 75 stations, was 3.31 inches. The departure from the normal for 48 stations having ten or more years of record was +0.40 inch. Nearly all the rainfall was received from the 3d to the 10th and from the 19th to the 21st; but there were light and scattered showers on the 12th, 13th, 15th, 23d, 24th, 26th, and 27th. The heaviest rain fell on the 4th, 6th, and 20th-21st. While snow did not fall at any station, there were snow flurries on the mountains of Preston County on the 15th.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Bayard, 25th; Brandywine, 16th, 24th, and 25th; Elkins, 1st, 2d, 10th, 15th, 17th, and 19th; and from the 23d to the 26th; Hinton, 1st, 6th, 11th, 12th, 14th, 17th, 18th, 23d, 25th, 26th, and 28th; Huntington, 24th and 25th; Mannington, 1st, 2d, 6th, 8th, 10th, 16th, 24th, 25th, 27th, and 28th; Marlinton, 1st to the 3d, 8th and 9th, 11th to the 14th, 17th and 18th; and from the 23d to the 30th; New Cumberland, 25th, 26th, and 27th; Parkersburg, 24th; Pickens, 15th; Pt. Pleasant, 11th; Terra Alta, 27th; Smithfield, 16th, 27th, and 28th; Wellsburg, 10th and 16th; Wheeling, 4th, 11th, 15th, 17th, and 22d, and from the 24th to the 27th.

Hail: Brownsville, 20th.

Halos, lunar: Wheeling, 23d, 25th, 26th, and 27th.

Thunderstorms (dates and number of stations reporting): 3d, 2; 4th, 2; 5th, 12; 6th, 5; 7th, 2; 8th, 4; 9th, 1; 12th, 1; 19th, 1; 20th, 9; 21st, 3; 23d, 1.

A solar eclipse was observed generally throughout the State on the afternoon of the 10th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

† Also on other dates. †† Received too late to be included in means and summaries.

Daily Precipitation for September, 1923.

§ Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

VOL. XXXI. PARKERSBURG, W. VA., OCTOBER, 1923. No. 10.

GENERAL SUMMARY.

October was exceptionally dry, sunshiny, and cool. The rainfall was deficient in all localities and was the lightest of October State record, except in 1892, 1895, 1897, 1901, 1912, and 1920. Rain fell at only two stations during the first fourteen days and the conditions were decidedly droughty until the 23d. The smaller streams were practically dry in many sections of the State, where water was scarce for domestic use. At Parkersburg the sunshine averaged 72 per cent of the possible amount, the highest average for any October of State record since 1897, except in 1901, when the October average was also 72 per cent. It was also the coolest October of State record since 1909, except in 1917. Freezing temperatures were general during the first decade, except in the extreme western counties, causing considerable damage to corn and garden truck. Killing frosts occurred in all sections near the beginning of the last decade. The droughty conditions were unfavorable for seeding and germination, but the dry weather was especially favorable for outdoor work.

TEMPERATURE.

The monthly mean for the State, determined from 54 stations, was 52.1°. The departure from the normal for 42 stations having ten or more years of record was —2.8°. The temperature was considerably below the normal from the 1st to the 12th and the 20th to the 27th, giving freezing temperature in most sections near the close of the first decade and freezing temperatures and killing frosts in all sections during the first of the last decade. The lowest temperatures were general on the 21st, 22d, and 23d, but in a few localities the lowest readings were recorded on the 6th, 9th, and 31st. From the 12th to the 19th the temperature averaged about 10° above the normal, with the highest readings on the 13th and 14th. Cool weather set in at the close of the month.

PRECIPITATION.

The average precipitation for the State, determined from 75 stations, was 1.39 inches. The departure from the normal for 45 stations having ten or more years of record was —1.56 inches. Light showers occurred in the western and northern counties on the 15th and light to moderate rain was general on the 18-19th, 23d-24th, 28th, and 29-30th. Snow flurries or light snow fell in many of the mountain districts on the 23d and 24th.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Bayard, 2d, 15th, 16th, and 17th: Elkins, 2d, 3d, 5th, 6th, 8th, 9th, 10th, 12th, 13th, 16th, 21st, 22d, and 27th; Fairmont, 2d, 3d, 5th, and 10th; Hinton, 1st, 2d, 4th, 6th, 8th, and from the 10th to the 16th; Marlinton, 1st to the 13th, 15th, 16th, 18th, and from the 20th to the 27th; New Cumberland, 6th and 7th, and from the 9th to the 13th; Parkersburg, 5th, 10th, and 26th; Smithfield, 2d; Terra Alta, 25th; Wellsburg, 9th, 10th, and 16th; Wheeling, 1st, 2d, 6th, and from the 8th to the 14th, and the 21st and 22d.

Halos, lunar: Elkins, Parkersburg, and Pickens, 16th.

Haze, light: Bayard, 1st, 8th, 9th, 11th, and 29th; Terra Alta, 1st, 2d, and 9th.

Sleet: Bancroft, Bayard, Benson, Brandywine, Brownsville, Cairo, Cheat Bridge, Elkins, Marlinton, Moorefield, Parkersburg, Valley Chapel, and Smithfield, 23d; Pickens, 24th. *Thunderstorms:* Cheat Bridge ahd Roanoke, 30th.

Smoke, light: Bayard, 12th and 13th; Lost Creek, 9th, 10th, 12th, and 27th; Pickens, 4th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

Daily Precipitation for October, 1923.

§ Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

VOL. XXXI. PARKERSBURG, W. VA., NOVEMBER, 1923. No. 11.

GENERAL SUMMARY.

The month was slightly cooler than usual and the temperature was continuously near the normal, except for three or four short periods. The highest temperature recorded, 73°, was exceeded in every other November of State record and the lowest readings were considerably above the average for November. As usual during November, the month was somewhat cloudy. In marked contrast with the preceding month, the precipitation was considerably above the normal and well distributed. Deficiencies were noted at only six stations, four in the southern section and two in the eastern panhandle. The snowfall was unimportant in nearly all the agricultural districts, but light to moderate snow fell on two or three days in many of the more elevated localities. Corn husking and threshing were general and the conditions were mostly favorable for outdoor work. At the close of the month winter wheat was in good condition.

TEMPERATURE.

The monthly mean for the State, determined from 51 stations, was 42.3°. The departure from the normal for 41 stations having ten or more years of record was — 0.4°. The temperature was considerably below the normal from the 7th to the 10th and in the northern districts on the 20th, with the lowest readings occurring generally on the 9th and 10th. The warmest weather occurred on the 13-14th and 21st-22d.

PRECIPITATION.

The average precipitation for the State, determined from 75 stations, was 3.49 inches. The departure from the normal for 48 stations having ten or more years of record was +0.84 inch. The precipitation was heaviest over the central and northwestern counties, and lightest over the extreme eastern counties. Practically all the precipitation was received from the 3d to the 8th, 15th to the 17th, and on the 22-23d, 26th, and 29-30th, the greatest amounts being measured on the 4th, 5th, 7th, 23d, and 30th. Snow flurries occurred in most of the central and northern counties on the 7th and 8th, and moderate snow, ranging generally from 1 to 8 inches, fell over the northern mountain regions from the 7th to the 9th and on the 16-17th.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Brownsville, 6th; Charleston, 12th, 14th, 22d; Crawford, 6th; Elkins, 6th, 13th, 14th, 15th, 28th; Hinton, 0th, 14th; Lock 15, Mon. R., 14th, 15th, 16th: Morgantown, 3th, 14th; Moundsville, 2d, 14th; New Cumberland, 15th; Parkersburg, 14th; Rowlesburg, 5th, 6th, 12th to 16th, 20th; Terra Alta, 6th, 16th, 17th; Wheeling, 2d, 12th to 15th, 20th, 29th.

Halo, lunar: Elkins, 21st, 22d.

Halo solar: Bayard and Ryan, 22d.

Haze: Terra Alta, 22d, 28th.

Sleet: Marlinton, 7th; Terra Alta, 7th, 17th.

Smoke: Lost Creek, 6th.

Thunderstorms: Horner and Roanoke, 6th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

Daily Precipitation for November, 1923.

§ Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXXI. Parkersburg, W. Va., December, 1923. No. 12.

GENERAL SUMMARY.

The month was the warmest December of State record, the average temperature, 43.1°, exceeding by 2° the average for the warm December in 1918. With one exception, it was also the wettest December of State record, the average precipitation being 5.82 inches, while the State average for December in 1901 was 5.84 inches. The month was nearly continuously warm, the temperature being below the normal for only two days, the 14-15th. The precipitation was favorably distributed over the State and throughout the month, the rivers being at only moderate stages until the last day. On the 31st moderate to heavy rain caused marked rises in some of the smaller rivers and streams. A flood stage of 23.8 feet occurred at Glenville at 10 p. m. of the 31st. The snowfall was only about one-third of the December average, and in most of the agricultural districts it melted nearly as fast as it fell. The greatest 24-hour amount, 10 inches, fell at Cortland, Tucker County, and the greatest monthly amount, 16 inches, was received at Pickens, Randolph County. The conditions were favorable for outdoor work, late pastures, and winter grains.

TEMPERATURE.

The monthly mean for the State, determined from 52 stations, was 43.1°. The departure from the normal for 43 stations having ten or more years of record was + 9.5°. The month was continuously warm, except the 14-15th, the highest temperature occurring on the 8th, 13th, 21st, and 31st. The 14th was cool, but the lowest temperatures occurred on the morning of the 15th.

PRECIPITATION.

The average precipitation for the State, determined from 75 tations, was 5.82 inches. The departure from the normal for 0 stations having ten or more years of record was + 2.35 inches. Nearly all the precipitation was received on the 4-6th, 9-11th, 3-14th, 20-25th, 27-28th, and 30th-31st. In many of the more levated localities, snow fell on the 6-8th, 13-14th, 24-25th, hile light snow or snow flurries fell in nearly all the agricultural istricts on the 13-14th and 25th.

MISCELLANEOUS PHENOMENA.

Fogs, dense: Bayard, 4th; Bens Run, 21st; Elkins, 2d, 4th, d 12th; Hinton, 2d, 5th, 17th, and 22d; Huntington, 4th; ew Cumberland, 18th and 19th; Smithfield, 20th and 21st; ellsburg, 20th; Wheeling, 1st to the 4th, 12th, and from the th to the 19th.

Halos, lunar: Bayard, 13th, 14th, and 16th; Clarksburg, th; Elkins, 15th, 17th, and 19th; Parkersburg, 15th and 17th; Ryan, 16th; Terra Alta, 16th and 21st; Wellsburg, 16th.

Halos, solar: Ryan, 15th. Terra Alta, 4th.

Sleet: Bens Run, 6th; Burlington, 30th; Lost Creek, 26th; Marlinton, 27th and 30th; Martinsburg, 25th and 30th; Romney, 13th; Terra Alta, 23d and 30th.

Thunderstorms (dates and number of stations reporting): 5th, 1; 6th, 1; 7th, 1; 11th, 1; 28th, 2; 30th, 4; 31st, 9.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

Daily Precipitation for December, 1923.

---

§ Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXXI. Parkersburg, W. Va., Year, 1923. No. 13.

GENERAL SUMMARY.

The year 1923 averaged slightly cooler and considerably wetter than usual. The snowfall, however, was much below the normal.

January, June, and September averaged moderately warm and the temperature for December was more than 9° above the normal. The monthly averages were deficient in February, March, April and May, May being especially cool. July and October were also cool, while the averages for August and November were slightly below the normal.

The months of early growth were dry, especially May, but from June to September, inclusive, the averages were slightly above the normal. October was dry, but December was decidedly wet.

The conditions were somewhat unfavorable for growth, owing to cool weather in May and October and to a long drought over the eastern counties. Heavy local rains also caused considerable damage.

The season of growth in most of the agricultural counties extended from May 10 to October 5, being nearly the average length.

The average cloudiness was below the normal. The sunshine at Parkersburg averaged 53 per cent of the possible amount, or 6 per cent above the normal. The average at Elkins was 51 per cent or 6 per cent above the normal.

The wind movement at Parkersburg was 48,367 miles and at Elkins 48,016 miles.

THE WEATHER BY MONTHS.

January.—January was a warm and rainy month, favorable for outdoor work and the wintering of stock. A temperature of zero occurred at but one station. The snowfall was generally unimportant, the ground being bare in most of the agricultural districts nearly the entire month.

February.—February was continuously cold after the 3d and the rainfall was somewhat in excess. The snowfall was again light and the conditions were unfavorable for winter grains, owing to the lack of snow-cover during periods of low temperatures. The rainfall was somewhat in excess.

March.—March was also cold, but somewhat drier than usual, with ample sunshine. It was the third consecutive month with light snowfall. The rivers were only at moderate stages. The conditions were excellent for fruit trees, as fruit buds were practically dormant at the close of the month. Low temperature during the last two decades, however, caused some damage to winter grains.

April.—April was nearly continuously cold and the lowest temperature of April State record, 4 degrees below zero, occurred on the 1st. Owing to the lateness of the season and the favorable conditions in March, the cold weather caused but little damage to fruit, except in the extreme eastern counties, where bloom was killed in many localities. The month was exceptionally sunshiny.

THE WEATHER BY MONTHS.

Continued from page 49.

MAY.—May was cool and dry. Light to heavy snow squalls occurred from the early morning of the 9th until into the night of the 9-10th, giving amounts from 4 to 10 inches n many of the mountain regions. The mid-day temperature of the 9th was the lowest of mid-day State record for May. The season was ten days late at the close of the month.

JUNE.—June was somewhat warmer and slightly wetter than usual, with the rainfall unfavorably distributed. The conditions were droughty over the eastern counties, while xcessive rains in Brooke and Wyoming counties caused damaging floods in the local treams. Rain was much needed during the last decade

JULY.—July was cool and wet, with frequent thunderstorms, which were attended by eavy rain in the central and western counties. The conditions continued droughty ver the eastern counties.

AUGUST.—August was also cool and wet, with the rainfall unfavorably distributed. t Pickens the monthly fall was 12.42 inches, of which 8.06 inches fell in 72 consecutive ours. A stage of 22.4 feet was reached in the Little Kanawha River at Glenville, and the streams were unusually high in Jackson County and the southern portion of Wood County. There were frosts in some of the mountain regions on the 23d–24th.

SEPTEMBER.—Although September averaged warmer than usual, the week ending on the 17th was the coolest of State record for the middle of September, giving light to killing frosts in many localities of the northern and central counties. The conditions were favorable for the ripening of crops and farm work.

OCTOBER.—October was exceptionally dry, sunshiny, and cool. Rain fell at but one station during the first fourteen days and the conditions were decidedly droughty until the 23d. Killing frosts occurred in all districts during the last decade.

NOVEMBER.—The temperature during November was continuously near the normal. The highest recorded, 73 degrees, was exceeded in every other November of State record, while the lowest readings were considerably above the November average. The precipitation was above the normal.

DECEMBER.—This month was the warmest December of State record and also the wettest, except in 1901. The temperature was below the normal only two days. The precipitation was favorably distributed. The snowfall was only about one-third the normal. The conditions were favorable for winter grains and late pastures.

Monthly and Annual Precipitation for the Year 1923, with Departures from Normal.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXXII. Parkersburg, W. Va., January, 1924. No. 1.

GENERAL SUMMARY.

January was characterized by moderately cold weather, heavy rainfall, and exceptionally light snowfall. The temperature averaged two degrees below the normal, the rainfall was the heaviest of January State record since 1917, and the snowfall was the lightest of January record, except in 1896, when the January average was also 1.8 inches. Heavy rain early in the month caused floods in many of the smaller rivers and streams and a slight to moderate flood in the Ohio River. The rivers in the eastern panhandle counties were also high on the 17th, when the South Branch Potomac at Brandywine was the highest since 1913. The precipitation, however, was fairly well distributed over the State and throughout the month. In most of the agricultural districts the ground was practically bare during the entire month, the conditions being unfavorable for winter wheat, which was injured by cold weather. Dirt roads were either soft and muddy or frozen rough.

RIVERS.

The Ohio River was near or somewhat above the flood stage from Marietta to below Huntington from January 3 to January 6. The following crest stages, in feet and tenths, were noted: Marietta, 34.9; Parkersburg, 37.0; Point Pleasant, 45.9; Dam 26, 49.4. There was practically no flood damage.

TEMPERATURE.

The monthly mean for the State, determined from 46 stations, was 30.1°. The departure from the normal for 38 stations having ten or more years of record was −2.7°. The temperature was considerably below the normal from the 1st to the 9th, 13th to the 16th, and the 20th to the 28th, with the lowest readings occurring on the 5-6th and 21st-22d. The highest temperatures were noted on the 9-12th, 16th, and 29th-31st.

PRECIPITATION.

The average precipitation for the State, determined from 70 stations, was 4.62 inches. The departure from the normal for 44 stations having ten or more years of record was +0.57 inch. The precipitation was heaviest over the western counties and ightest over the extreme eastern, while the snowfall was greatest over the eastern counties. Nearly all the precipitation was eceived on the 1st-3d, 11th. 16-17th, 24-25th, and 31st, the reatest amounts being recorded on the 3d and 16th. Snow lurries or light to moderate snow fell in many sections of the State on the 5th, 11-12th, 13th, 16th, and 24-26th. The heaviest local snowfall, 16.0 inches, was at Cortland, Tucker County. The monthly amount at 18 stations was only a trace, or not nough to measure.

MISCELLANEOUS PHENOMENA.

Halos, lunar: Elkins and Ryan, 24th; Parkersburg, 18th.
Halos, solar: Bruceton Mills, 15th and 28th.
Sleet: Bayard, Beckley, Cheat Bridge, Elkins, Gary, Marlinton, Martinsburg, Moorefield, Parkersburg, Pickens, Piedmont, and Romney, 2d; Bayard, 3d; Brandywine, 4th; Romney, 15th; Marlinton, 16th; Union, 23d; Bens Run, Bluefield, Camden-on-Gauley, Elkins, Clarksburg, Martinsburg, Parkersburg, Smithfield, and Wheeling, 24th; Bayard and Smithfield, 25th; Fairmont, 26th; Marlinton, 30th.
Thunderstorm: Lewisburg, 29th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters a, b, c appearing in the table indicate number of days missing; for example, b represents two days, etc.

Daily Precipitation for January, 1924.

Except as otherwise indicated observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at the time of observation.

*** Regular Weather Bureau station; precipitation is for 24-hour period, midnight to midnight.

‖ Precipitation measured in the morning; amount then recorded is for the preceding 24 hours. * Precipitation included in the next following measurement.

T. Trace, or less than 0.01 inch.

‡‡‡ Probably incomplete.

Daily Temperatures for January, 1924.

§ Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist.

Vol. XXXII. Parkersburg, W. Va., February, 1924. No. 2.

GENERAL SUMMARY.

The temperature averaged slightly below the normal and the precipitation slightly above. The month was characterized by nearly continuously cold weather after the 5th and by frequent and well distributed rains and snows While the snowfall was somewhat above the February average, the ground was practically bare in most of the agricultural districts the greater part of the month. Sleet or glaze storms occurred in many localities on the 17th and 19-20th, causing some damage to fruit trees and telegraph and telephone wires. Heavy rain on the 19-20th also caused marked rises in the rivers. The conditions were generally unfavorable for winter grains, which were in poor condition at the close of the month.

RIVERS.

Heavy rain on the 19-20th caused a slight flood in the Little Kanawha River and a marked rise in the Ohio River. A crest stage of 26 2 feet was reached at Glenville and 21.8 feet at Creston. The crest stage at Parkersburg was 24.5 feet. At the close of the month the rivers were unusually low.

TEMPERATURE.

The monthly mean for the State, determined from 52 stations, was 31.6°. The departure from the normal for 41 stations having ten or more years of record was —0.4°. The month opened warm. the highest temperature occurring on the 4th, but from the 5th to the 26th, except the 19th, the temperature was continuously below the normal. The lowest readings occurred generally on the 16th and 24th.

PRECIPITATION.

The average precipitation for the State, determined from 73 stations, was 3.21 inches. The departure from the normal for 48 stations having ten or more years of record was +0.15 inch. There were two marked periods of precipitation from the 5th to the 13th and the 17th to the 22d. The greatest amounts were recorded on the 5th, 12th, 17th, and 19-20th. Light to moderate snow fell in many localities from the 6th to the 14th, and on the 20th-22d and 25th, the greatest amounts being received on the 10th, 12th, and 19-20th.

HAIL.

On the 5th. during a thunderstorm, light hail fell in many sections of Barbour, Gilmer, Harrison, Lewis, Marion, Monongalia, Pocahontas, and Randolph counties.

MISCELLANEOUS PHENOMENA.

Fogs dense: Bayard, 4th and 5th; Benson, 17th; Brownsville, 2d and 25th; Morgantown, 25th; Pickens, 17th; Wellsburg, 26th.

Halos, lunar: Parkersburg, 16th; Ryan, 27th.

Halos, solar: Bruceton Mills, 9th, 11th, and 26th; Ryan, 11th.

Haze, light: Bayard, 26th, 27th, and 28th; Bens Run, 18th; Brownsville, 10th and 26th.

Sleet: Valley Chapel, 6th; Bancroft, 10th; Bluefield, 14th; Cheat Bridge, 15th; Bancroft and Parkersburg, 16th; Bancroft, Bayard, Benson, Brownsville, Burlington, Cheat Bridge, Elkins, Fairmont, Valley Chapel, Marlinton, New Cumberland, Roanoke, Romney, Ryan, Stony River Dam, and Wheeling, 17th; Bayard, Bens Run, Davis, and Martinsburg, 18th; Bayard, Bruceton Mills, Burlington, Davis, Elkins, Marlinton, Parsons, Pickens, Romney, Upper Tract, and Wheeling, 19th; Bayard, Brandywine, Bruceton Mills, Fairmont, Logan, Marlinton, Martinsburg, Parsons, and Upper Tract, 20th; Union, 25th.

Thunderstorms (dates and number of stations reporting): 5th, 20.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

Daily Precipitation for February, 1924.

§ Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
CHARLES F. MARVIN, Chief

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXII Parkersburg, W. Va., March, 1924 No. 3

GENERAL SUMMARY

March was cool and generally cloudy, with the precipitation averaging slightly above the normal. The month was characterized by low mid-day temperatures, unfavorably distributed rainfall, and excessive rainfall and floods over the northern districts near the close of the last decade. The daily minimum temperatures were somewhat above the March average. The snowfall was nearly twice the average and was the heaviest of March record since 1906, except in 1914 and 1916 During the greater part of the month, however, the ground was practically bare in most agricultural districts, and the conditions were unfavorable for winter grains. Farm work was also about ten days late at the close of the month. The conditions, however, were excellent for fruit trees, fruit buds being dormant at the close of the month.

RIVERS

Excessive rain and melted snow over the northern districts on the 28-29th caused marked floods in the Monongahela and Potomac basins. The business section of Piedmont was covered with from 4 to 8 feet of water, resulting in a heavy property loss. Railroad and traffic bridges from Piedmont to Westernport were washed away. The greatest damage, however, was wrought in Cumberland, Md. The river at Pittsburgh reached a stage of 29.2 feet, the highest stage since March, 1913, and at Parkersburg and Point Pleasant the crest stages were slightly more than 4 feet above the flood-line, or 40.2 and 44.5 feet, respectively.

TEMPERATURE

The monthly mean for the State, determined from 53 stations, was 38.9°. The departure from the normal for 42 stations having ten or more years of record was −3.9°. The first six days were moderately warm, but the temperature was continuously below the normal from the 7th to the 27th, with the lowest readings occurring generally on the 7th, 9th, and 17th. Moderately warm weather prevailed from the 27th to the 30th, with the highest temperature occurring on the 29th. Colder weather set in on the 31st.

PRECIPITATION

The average precipitation for the State, determined from 76 stations, was 4.16 inches. The departure from the normal for 47 stations having ten or more years of record was +0.33 inch. Most of the precipitation was received on the 5th, 10-11th, 21st-22d, 26th, and 28-29th, the greatest amounts being recorded on the 11th, 21st, and 29th. Most of the snowfall was received on the 10-11th and 21st, but in the more elevated localities light to moderate snow fell on the 2d, 6th, 15-16th, and 27th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Bruceton Mills, 5th.

Halos, lunar: Bayard, 14th; Parkersburg, 13th; Wheeling, 13th and 19th.

Halos, solar: Bayard, 28th; Bruceton Mills, 14th and 28th.

Sleet: Union, 1st; Lost Creek, 2d; Wheeling, 20th; Bayard, Brandywine, and Union, 21st.

Thunderstorms (dates and number of stations reporting): 6th, 1; 7th, 1; 21st, 1; 25th, 1; 26th, 5; 28th, 4; 29th, 23; 30th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, [a], [b], [c] appearing in the table indicate number of days missing; for example, [b] represents two days, etc.

Daily Precipitation for March, 1924.

§ Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
CHARLES F. MARVIN, Chief

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXII PARKERSBURG, W. VA., APRIL, 1924 No. 4

GENERAL SUMMARY

April averaged somewhat cooler and drier than usual, with the precipitation fairly well distributed. Frequent showers in most of the agricultural districts, however, delayed plowing and seeding. Following a cool March, several cool periods held back fruit bloom and the fruit prospects were excellent at the close of the month. While the snowfall was considerably above the April average, it was practically all received on the 1st. At the close of the month wheat was in poor condition, having been badly winter-killed; but pastures and meadows were generally in excellent condition.

RIVERS

Owing to heavy rain late in March, the Ohio River in most of the Parkersburg district was somewhat above the flood stage early in April. The following crest stages, in feet and tenths, were noted: Marietta, 39.1; Parkersburg, 40.2; Dam 19 O. R., 40.7; Dam 22 O. R., 44.0; Point Pleasant, 44.5.

TEMPERATURE

The monthly mean for the State, determined from 51 stations, was 50.5°. The departure from the normal for 40 stations having ten or more years of record was −0.8°. The month opened decidedly cool and the temperature was also somewhat below the normal on the 10-11th, 19-20th, and 22-23d. The lowest temperatures occurred on the 2d and 3d. The warm period extended from the 13th to the 17th.

PRECIPITATION

The average precipitation for the State, determined from 76 stations, was 3.24 inches. The departure from the normal for 50 stations having ten or more years of record was −0.36 inch. Light to moderate snow fell in practically all sections on the 1st, but melted nearly as fast as it fell in many localities. Rain was general from the 6th to the 10th, 17th to the 22d, and during the last three days, the greatest amounts being measured on the 6th, 18th, 28th, and 30th.

HAIL

Light hail fell in sections of the counties named below, as follows: Randolph, 6th: Webster, 18th; Berkeley, Brooke, Hancock, Lewis, Mineral, Preston, Putnam, Wirt, and Wood, 20th; Harrison, Lewis, and Marion, 21st; Lewis and Wetzel, 22d; Harrison, Lewis, Upshur, and Wirt, 28th; Roane, 29th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Bancroft, 7th and 23d; Elkins, 8th; Hinton, 12th and 27th; Marlinton, 15th.

Halos, lunar: Bayard, 17th; Elkins, 11th and 12th.

Halos, solar: Bruceton Mills, 3d; Ryan, 12th.

Sleet: Bancroft, 1st; Parkersburg, 22d; Terra Alta, 19th and 21st; Wellsburg, 21st.

Thunderstorms (dates and number of stations reporting): 6th, 2; 9th, 1; 14th, 3; 17th, 1; 18th, 2; 20th, 12; 21st, 3; 22d, 3; 25th, 1; 26th, 2; 27th, 1; 28th, 14; 29th, 5; 30th, 2.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, [a], [b], [c] appearing in the table indicate number of days missing; for example, [b] represents two days, etc.

CHARLES F. MARVIN, Chief

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXII   Parkersburg, W. Va., May, 1924   No. 5

GENERAL SUMMARY

The weather for the past month was remarkable, as compared with May weather records. The temperature averaged 55.5°, the lowest of May record, except in 1917, when the State average was also 55 5°. The average rainfall, 7.20 inches, much exceeded the average for any May of previous State record, being 1.01 inches more than the average for the wet May in 1908. In sections of the central and northern counties, especially the northern portion of the eastern panhandle, the monthly amounts ranged from near 9 inches to more than 12 inches, the greatest local monthly amount of record for May, 12.20 inches, being received at Burlington, Mineral County. Floods occurred in all streams in the northern and central counties, causing a marked to slight flood in the Ohio River to below Point Pleasant, the first flood of May record for Parkersburg. Owing to flooding, many fields had to be replowed and some replanted. Farm work was nearly at a standstill and germination and growth was much retarded. Fruit was apparently in good condition at the close of the month.

RIVERS

Excessive rain over the northern and central counties on the 11-12th and continued moderate to heavy rain on the 13th, 14th and 15th, caused decided floods in the Potomac, Monongahela, and Little Kanawha Basins, and the northern portion of the Great Kanawha Basin, giving a marked to slight flood in the Ohio River to below Point Pleasant. The following crest stages, in feet and tenths, were noted: Pittsburgh, 26.3; Dam 13 O. R., 39.3; Marietta, 35.8; Parkersburg, 37.4; Point Pleasant, 45.4.

TEMPERATURE

The monthly mean for the State, determined from 52 stations, was 55.5°. The departure from the normal for 41 stations having ten or more years of record was −6.3°. The temperature was continuously below the normal from the 1st to the 6th and from the 9th to the close of the month, except the 28th, with the lowest temperatures occurring generally on the 2d, 5th, and 10th. The highest temperatures occurred on the 6th and 7th.

PRECIPITATION

The average rainfall, determined from 80 stations, was 7.20 nches. The departure from the normal for 51 stations having en or more years of record was +3.21 inches. The heaviest ain fell over the Potomac and Monongahela Basins. Rain was uite general on the 1st and 4-5th and from the 8th to the 16th, 8th to the 21st, and from the 24th to the 29th, the greatest mounts being received on the 11-12th. Light to moderate snow il in a few of the more elevated localities of the mountain ounties on the 4th and 12th.

HAIL

Light hail fell in sections of Brooke County on the 16th and 18th and at Elkins, Randolph County, on the 16th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Bancroft, 4th, 5th, 10th, 13th, 19th, and 29th; Clarksburg, 5th; Elkins, 4th, 5th, and 10th; Fairmont, 5th; Hinton, 5th, 7th, 12th, 16th, and 28th; Huntington, 5th; Marlinton, 5th, 6th, 7th, 8th, 17th, 23d, and 31st; Martinsburg, 5th, 10th, 13th, and 17th; Moundsville, 5th, 13th, 17th, and 20th; New Cumberland, 5th, 7th, and 12th; Parkersburg, 5th; Stony River Dam, 8th and 11th.

Thunderstorms (dates and number of stations reporting): 3d, 7; 4th, 4; 5th, 2; 6th, 2; 7th, 1; 8th, 6; 9th, 3; 10th, 1; 11th, 1; 12th, 1; 13th, 1; 14th, 1; 15th, 2; 16th, 1; 18th, 1; 20th, 1; 24th, 1; 25th, 1; 29th, 4.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for May, 1924

§ Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
CHARLES F. MARVIN, Chief

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXII PARKERSBURG, W. VA., JUNE, 1924 No. 6

GENERAL SUMMARY

The temperature for June averaged practically normal and the rainfall was only slightly above the average. The month was characterized by scattered heavy rains and a long period of cool weather. Excessive rain on the 8-9th over the southern counties caused marked floods in sections of McDowell and Mercer Counties. The rainfall was apparently heaviest over the eastern portion of McDowell County. The flood in the Elkhorn Valley caused considerable damage but not as much as the flood in June, 1901, owing to the fact that better retaining walls were built after the flood of 1901 and that there was less rubbish in the river. Scattered excessive rains over the northern portion of the State on the 29th, especially over the Little Kanawha and Monongahela Basins, caused floods in the smaller streams. Considerable damage resulted to crops on low bottoms. All crops made fair to good growth during the month and were generally in good condition at the close, although from two to three weeks late.

TEMPERATURE

The monthly mean for the State, determined from 51 stations, was 68.7°. The departure from the normal for 38 stations having ten or more years of record was −0.1°. The first half of the month was cool, the lowest temperatures occurring on the first five days, generally on the 5th. Warm weather prevailed from the 16th to the 25th, with the highest temperatures on the 19th and 20th. The temperature was nearly normal after the 25th, although cooler weather set in on the 30th.

PRECIPITATION

The average precipitation for the State, determined from 79 stations, was 4.67 inches. The departure from the normal for 50 stations having ten or more years of record was +0.08 inch. The rainfall was heaviest over the central and southern counties and generally lightest over the northern counties. Rain was quite general on the 2d, 6th, 8-12th, 16th, 21st-24th, 27th, and 29th, the greatest amounts being measured on the 9th, 27th, and 29th.

HAIL

On June 13, between the hours of 12:30 and 1:15 p. m., a heavy hail storm passed into West Virginia between Waverly and Williamstown and moved eastward over Ritchie County. The stones were generally about three-fourth inch in diameter but many were as large as a hen egg. The greatest damage apparently resulted near Petroleum. As an estimate, the damage to crops was about $5,000 and to windows and roofs about $3,000.

Light hail fell in sections of the counties named below, as follows: Pleasants and Mingo, 8th; Mercer, 9th; Putnam, 10th; Webster, 8th and 13th; Harrison, 13th and 18th. Randolph, 13th; Hardy, 14th; Lewis, 13th and 19th; Wirt, 29th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Bancroft, 15th, 18th, and 19th; Davis, 15th; Elkins, 5th, 13th, 14th, 15th, 22d, and 28th; Hinton, 3d, 5th, 7th, 15th, 18th, and 28th; Huntington, 15th; Mannington, 2d, 3d, 5th, 7th 14th, 15th, 22d, 26th, 28th, and 30th; Marlinton, 3d, 5th, 6th, 7th, 15th, 17th, 18th, 19th, 26th, 27th, and 30th; Moundsville, 2d and 3d; New Cumberland, 2d, 3d, 5th, 10th, 15th, 19th, 22d, 26th, and 30th; Parkersburg, 2d and 22d; Rowlesburg, 5th; Terra Alta, 4th.

Frost, light: Bayard and Union, 5th.

Halo, lunar: Wheeling, 15th.

Halo, solar: Terra Alta, 3d.

Thunderstorms (dates and number of stations reporting): 1st, 1; 2d, 1; 3d, 1; 4th, 2, 5th, 3; 6th, 12; 8th, 23; 9th, 15; 10th, 5; 11th, 2; 12th, 3; 13th, 16; 14th, 1; 15th, 1; 18th, 6; 19th, 4; 21st, 3; 23d, 6; 24th, 1; 25th, 5; 26th, 3; 27th, 12; 28th, 7; 29th, 16.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for June, 1924

CHARLES F. MARVIN, Chief

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXII Parkersburg, W. Va., July, 1924 No. 7

GENERAL SUMMARY

The past month was the coolest July of State record since 1891, although only slightly cooler than July in 1909 and 1920. The month was characterized by nearly continuously cool weather for the season, the daily average temperatures being normal or slightly below at practically all stations until the 29th, except the 8th, 13th, 22d, and 23d, with the greatest daily plus departure of 4° for the month at Elkins and Parkersburg. The temperature was above 90° at only six stations, and the lowest readings ranged generally from 42° to 47°. The rainfall averaged only slightly below the normal and was well distributed. Only slight damage resulted from heavy showers and hail. All crops made good growth and were generally in fair to good condition at the close of the month, although corn was about two weeks late. The conditions were favorable for harvesting and haying from the 15th to the 21st and 24th to the 30th.

TEMPERATURE

The monthly mean for the State, determined from 52 stations, was 70.0°. The departure from the normal for 40 stations having ten or more years of record was —2.8°. With the exception of four or five days, the temperature was continuously below the normal until the 29th, the highest temperatures occurring generally on the 11th, 21st, 22d, and 30th. As a rule, the lowest readings occurred on the 18th.

PRECIPITATION

The average rainfall, determined from 81 stations, was 4.49 inches. The departure from the normal for 49 stations having ten or more years of record was —0.17 inch. The rainfall was heaviest over the central and mountain counties and lightest over the extreme eastern and southern counties. Showers occurred daily in most sections from the 4th to the 8th, and on the 10th, 11-12th, 21st-23d, and 30th-31st. the greatest amounts being measured on the 7th, 13th, 22d, 23d, and 31st. There were also light and scattered showers on the 3d, 15th, 17th, 18th, 25th, and 26th.

HAIL

From 5:30 to 6 00 p. m., July 30, a moderate hail storm, attending a heavy thundershower, passed eastward over Harrison County from near Bridgeport to Wilsonburg, the heaviest hail and rain falling in the vicinity of Clarksburg. The storm was about two miles in width and the stones ranged from about the size of a pea to nearly one inch in diameter. The estimated loss to crops from hail and heavy rain by this storm was about $1000.00

Light hail fell in sections of Wood County on the 4th and 12th and in Webster County on the 29th and 30th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Bancroft, 1st, 2d, 3d, 8th, 9th, 11th, 14th, 16th, 26th, 28th, and 29th; Charleston, 18th, 23d, and 26th; Creston, 3d, 9th, 11th, and 27th; Elkins, 1st, 9th, 11th, 18th, 20th, 24th, 27th, and 30th; Hinton, 9th, 11th, 12th, 15th, 17th, 19th, 23d, 24th, and 30th; Huntington, 11th; Marlinton, 1st, 3d, 9th, 10th, 14th, 16th, 18th, 24th, 26th, 27th, 29th, and 30th; Parkersburg, 5th; St. Marys, 9th, 11th, 16th, 18th, and 24th.

Thunderstorms (dates and number of stations reporting): 3d, 1; 4th, 5; 5th, 4; 6th, 7; 7th, 4; 8th, 2; 10th, 1; 12th, 8; 13th, 5; 15th, 1; 17th, 3; 21st, 4; 22d, 7; 23d, 5; 28th, 1; 29th, 2; 30th, 10; 31st, 14.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missingdays; for example, ^{b} represents two days, etc.

Daily Precipitation for July, 1924

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXII PARKERSBURG, W. VA., AUGUST, 1924 No. 8

GENERAL SUMMARY

August was somewhat wetter than usual, with about normal temperature and a large percentage of sunshine. The warmest weather of the season prevailed from the 4th to the 7th, although the temperature on the 31st was unusually high. Low temperatures were recorded generally on the morning of the 15th, with light frost in the mountain sections. The rainfall occurred mostly during thunderstorms and was unfavorably distributed, the greatest amounts being received in scattered localities of the southern and central counties, and the least in the middle western and extreme eastern sections. A heavy thundershower during the night of the 24-25th along the border of Harrison and Lewis Counties, caused considerable damage at Lost Creek and Janelew. Two young boys were drowned while playing near Hacker's Creek; several houses, one railway and five highway bridges were washed from their foundations, and crops generally destroyed. All crops made fair growth, and at the close of the month corn was in fair to poor condition and from two to three weeks late. Harvesting and haying progressed rapidly, and a good crop of hay had been secured.

TEMPERATURE

The monthly mean for the State, determined from 51 stations, was 71.7°. The departure from the normal for 39 stations having ten or more years of record was +0.1°. The temperature was considerably above the average from the 4th to the 10th, and from the 22d to the 31st, inclusive, with the highest temperatures occurring generally on the 5th, 6th, 9th, and 31st. Cool weather prevailed on the 1st and 2d, and from the 15th to the 21st, with the lowest readings on the 15th and 19th. The highest monthly mean was 76.0° at Glenville, and the lowest was 62.8° at Cheat Bridge. The highest temperature was 104° at Martinsburg and Moorefield on the 6th, and the lowest was 34° at Terra Alta on the 15th.

PRECIPITATION

The average precipitation for the State, determined from 81 stations, was 4.63 inches. The departure from the normal for 48 stations having ten or more years of record was +0.27 inch. Showers occurred daily in most sections from the 1st to the 12th, on the 17th, and from the 20th to the 26th. The greatest amounts being measured on the 12th, 21st, 23d, and 25th. The greatest monthly rainfall was 9.34 inches at Horner, and the least was 0.69 inch at Martinsburg. The greatest amount in any 24 consecutive hours was 4.00 inches at Clay on the 21st.

MISCELLANEOUS PHENOMENA

Fogs, dense: Beckley, 8th and 9th; Cairo, 9th and 29th; Creston, 4th, 13th, and 14th; Elkins, 10th, 11th, 13th, 15th, 18th, 24th, 27th, 29th, 30th, and 31st; Hinton, 2d, 6th, 7th, 26th, 28th, and 30th; Huntington, 30th; Marlinton, 1st to the 4th, 9th and 10th, 13th to the 19th, and from the 26th to the 31st; Parkersburg, 13th and 24th; Rowlesburg, 11th, 15th, and 29th; Smithfield, 24th, 28th, and 29th; Wellsburg, 18th and 29th; Wheeling, 13th and 24th; Williamson, 8th, 9th, and 29th.

Halo, solar: Terra Alta, 19th.

Thunderstorms (dates and number of stations reporting): 1st, 8; 5th, 7; 6th, 5; 7th, 5; 8th, 1; 9th, 10; 10th, 3; 11th, 5; 12th, 7; 13th, 1; 17th, 1; 20th, 17; 22d, 4; 23d, 8; 24th, 6; 25th, 7; 27th, 2.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for August, 1924

CLIMATOLOGICAL DATA

NOV 18

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXII   Parkersburg, W. Va., September, 1924   No. 9

GENERAL SUMMARY

The past month was much the wettest September of State record, the average rainfall, 5.96 inches, exceeding that of the previous wettest September by 1.20 inches. It was also the coolest September, except in 1918, when the State average was 60.5°. Practically half of the month's rainfall was received on the last three days, when floods occurred in the smaller streams and high stages in the rivers for the season, causing the loss of much corn on bottom lands. The temperature was near the freezing point or slightly below in the mountain sections on the morning of the 6th, being exceptionally low for the season and causing heavy to killing frosts and much damage to corn. Light frosts occurred in many other portions of the State on that date, but only slight damage resulted. Owing to cool weather and heavy rains, the month was decidedly unfavorable for the ripening of corn. Fall plowing and seeding was also retarded by unfavorable weather conditions. At the close of the month early corn was being cut, with only a fair yield; but late corn was green and small, with poor prospect for maturing. In some sections fruit was plentiful, but as a rule the fruit crop was fair to poor.

TEMPERATURE

The monthly mean for the State, determined from 52 stations, was 60.7°. The departure from the normal for 41 stations having ten or more years of record was —4.8°. With the exception of the 1st-2d, 12th, 19th-21st, and 27-28th, the month was cool, with the highest temperatures occurring on the 1st and the lowest on the 6th, 11th, and 25th.

PRECIPITATION

The average precipitation for the State, determined from 81 stations, was 5.96 inches. The departure from the normal for 50 stations having ten or more years of record was + 3.14 inches. The rainfall was well distributed, although somewhat the heaviest over the central and northern counties and lightest over the eastern counties. Snow flurries were noted at Bruceton Mills, Davis, and Cheat Bridge on the 10th. Most of the rainfall occurred on the 1st-2d, 5th, 8-9th, 13th, 18th-22d, and 27-30th, the greatest amounts being recorded on the 2d, 9th, 21st-22d, and 29-30th.

HAIL

Light hail fell in sections of Braxton, Grant, Marion, Preston, and Randolph Counties on the 9th; Braxton and Mingo Counties on the 17th; Webster County on the 22d.

MISCELLANEOUS PHENOMENA

Frosts, killing, or first freezing temperature, stations and date: Brandywine, Cheat Bridge, Moorefield, Pickens, and Ryan, 6th; Bayard, 7th; Wellsburg, 11th; Wardensville, 25th.

Halos, lunar: Elkins, 6th; Wheeling, 4th.

Halo, solar: Bayard, 16th.

Haze, light: Bayard, 15th and 17th; Bens Run, 18th; Burlington, 27th.

Snow: Cheat Bridge, Davis, and Bruceton Mills, 10th.

Thunderstorms (dates and number of stations reporting): 1st, 5; 2d, 4; 3d, 1; 8th, 3; 9th, 6; 12th, 1; 17th, 5; 20th, 1; 21st, 4; 22d, 8.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, a, b, c appearing in the table indicate number of missingdays; for example, b represents two days, etc.

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXII PARKERSBURG, W. VA., OCTOBER, 1924 No. 10

THE LIBRARY OF THE
DEC 29 1924
UNIVERSITY OF ILLINOIS

GENERAL SUMMARY

October was exceptionally dry, the average precipitation, 0.40 inch, being the least for any month of State record. For October, 1897, the average was 0.53 inch, and for October, 1901, 0.54 inch. At Sutton no rain fell during the entire month. At Parkersburg there were 27 consecutive days without measureable precipitation, the longest period of local record. Owing to the lateness of the season and to heavy rain at the close of September, the drought caused but slight damage or inconvenience. Drilling was suspended in some localities on account of lack of water and water had to be carried for stock in a few localities.

The temperature was nearly typical of the average October, the average for the State being only slightly below the normal. The month, however, was characterized by exceptionally fair weather, with generally only slight temperature changes from day to day. There is no record of a pleasanter month.

The conditions were exceptionally favorable for the ripening of corn and outdoor work, as killing frosts were not general in most of the agricultural districts until the 22d, about ten days later than usual. At the close of the month corn husking was general, the yield being generally poor.

TEMPERATURE

The monthly mean for the State, determined from 52 stations, was 54.6°. The departure from the normal for 42 stations having ten or more years of record was —0.2°. The month opened cool and the temperature was slightly below or near the normal from the 8th to the 13th. The lowest temperatures occurred from the 21st to the 25th. Moderately warm weather prevailed from the 4th to the 8th, 15th to the 19th, and the 27th to the 31st, with the highest temperatures occurring from the 3d to the 6th.

PRECIPITATION

The average precipitation for the State, determined from 78 stations, was 0.40 inch. The departure from the normal for 51 stations having ten or more years of record was —2.57 inches. Scattered and light showers occurred on the 6-7th and 19-20th. Light to moderate rain was quite general on the 27-28th. Light rain also occurred in many localities late on the 31st. A trace of snow was observed at Terra Alta on the 21st.

MISCELLANEOUS PHENOMENA

Halo, lunar: Wheeling, 9th and 12th.

Haze, light: Bens Run, 9th; Lost Creek, 13th to the 18th, 21st to the 23d, and from the 25th to the 30th; Terra Alta, 10th to the 13th, 16th, 18th, 19th, 24th, 25th, 28th, and 29th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used i determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, a, b, c appearing in the table indicate number of missingdays; for example, b represents two days, etc.

CHARLES F. MARVIN, Chief

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXII PARKERSBURG, W. VA., NOVEMBER, 1924 No. 11

GENERAL SUMMARY

The temperature for November averaged practically normal, but the precipitation was considerably below the average. The first half of the month was generally fair, warm and dry, a continuation of the pleasant weather that prevailed during October; but the last half was characterized by cloudy and cold weather, with frequent rains and snows, the conditions being in marked contrast with the first fourteen days. However, the good rains near the middle of the month were much needed to supply soil moisture and add to the water supply. The snowfall averaged nearly twice the November average and during the colder periods of the month was a protection for winter grains, which were in good condition at the close of the month. Corn husking was general, with poor to fair yield. Dirt roads were generally soft or frozen rough after the 15th.

TEMPERATURE

The monthly mean for the State, determined from 49 stations, was 42.9°. The departure from the normal for 39 stations having ten or more years of record was +0.2°. The temperature was generally considerably above the normal until the 15th, although practically normal on the 8-10th. The last 16 days were colder than usual, except the 21st-22d. The highest temperatures were recorded on the 5th, 6th, and 7th and the lowest on the 17th, 18th, 19th, and 26th.

PRECIPITATION

The average precipitation for the State, determined from 76 stations, was 2.05 inches. The departure from the normal for 47 stations having ten or more years of record was —0.54 inch. The precipitation was somewhat the heaviest over the mountain and southern counties and lightest over the eastern panhandle counties. Precipitation was quite general on the 7-8th, 14-18th, 21st-24th, and 29-30th, the greatest amounts being recorded on he 15-16th and 22d. In many localities the first snow was observed on the 15th. In the more elevated localities from 1 to bout 4 inches of snow fell from the 15th to the 18th. Light now was also quite general on the 24-25th. Snow was general n the 29-30th, when about one-half of the month's snowfall was received.

MISCELLANEOUS PHENOMENA

Fogs, dense: Charleston, 1st; Marlinton, 7th; Pickens, 8th; Bayard, Cairo, Elkins, Moundsville, and Parkersburg, 10th; Marlinton and Moundsville, 11th; Marlinton, 12th and 13th.

Halos, lunar: Elkins, 6th; Parkersburg, 3d.

Halo, solar: Parkersburg, 5th.

Sleet: Parkersburg, Smithfield, and Upper Tract, 15th; Bens Run, Camden-on-Gauley, and Sharples, 22d; Terra Alta, 23d; Fairmont, 25th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Except as otherwise indicated observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at the time of observation.

*** Regular Weather Bureau station; precipitation is for 24-hour period, midnight to midnight.

‖ Precipitation measured in the morning: amount then recorded is for the preceding 24 hours. * Precipitation included in the next following measurement.

T. Trace, or less than 0.01 inch.

‡‡‡ Probably incomplete.

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXII Parkersburg, W. Va., December, 1924 No. 12

GENERAL SUMMARY

The temperature for December averaged practically normal, the State mean being only 0.2° below the average for 33 years. The month, however, was mostly moderately warm during the first two decades but unusually cold during the last decade. From the 25th to the 29th the morning temperatures were near zero or slightly below in most localities. The day temperatures were also low during that period. The precipitation was generally considerably below normal, except in some of the southern counties, where the amounts were slightly in excess. The snowfall was exceptionally light, the State average being only 1.7 inches, the least for any December of State record, except in 1900 and 1911. The rivers were low. Navigation on the Ohio River was practically suspended after the 25th to the close of the month. Winter grains were in good condition until the 20th, but were damaged during the period of low temperature, owing to lack of snow-cover.

TEMPERATURE

The monthly mean for the State, determined from the records of 52 stations, was 33.1°. The departure from the normal for 38 stations having ten or more years of record was —0.2°. The month opened cold and the temperature was somewhat below the normal on the 10-11th and 14-15th, and much below the normal from the 20th to the 30th, the lowest temperatures being generally recorded on the 26th and 29th. Moderately warm weather prevailed from the 5th to the 9th and the 16th to the 19th, with the highest temperatures occurring generally on the 17th and 18th.

PRECIPITATION

The average precipitation for the State, determined from the records of 76 stations, was 2.58 inches. The departure from the normal for 46 stations having ten or more years of record was —0.79 inch. The precipitation was lightest over the eastern panhandle counties and heaviest over the southern counties. Precipitation was general from the 4th to the 9th and on the 12-3th, 17-18th, 20th, 24th, and 30th-31st, the greatest amounts being recorded on the 5th, 7-8th, and 24th. The amounts recorded on the other dates were generally light. The greater part of the snowfall was received on the 13th, 20th, and 22d, but light snow or snow flurries were observed at many stations n the 10th, 12th, and 28th. At several stations no snow was bserved.

MISCELLANEOUS PHENOMENA

Fogs, dense: Bancroft, 18th; Bruceton Mills, 3d, 4th, and 7th; Elkins, 4th and 5th; Glenville, 5th; Marlinton, 19th; Moundsville, 5th; Philippi, 4th; Romney, 19th.

Hail: Parkersburg, 5th.

Halos, lunar: Bayard, 13th; Morgantown, 9th.

Halos, solar: Bayard, 18th and 30th.

Sleet: Bancroft, Brownsville, Clarksburg, Creston, Elkins, Lost Creek, Moundsville, Parkersburg, Ryan, Smithfield, and Terra Alta, 3d; Bayard, Creston, and Terra Alta, 4th; Arbovale, Fairmont, Marlinton, Moorefield, Smithfield, and Union, 24th; Marlinton, 30th; Brownsville and Elkins, 31st.

Thunderstorms: Bancroft and Bens Run, 7th; Parkersburg, 5th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for December, 1924

CHARLES F. MARVIN, Chief

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXII PARKERSBURG, W. VA., YEAR, 1924—No. 13

APR 7 1925

GENERAL SUMMARY

The year 1924 was decidedly colder and wetter than usual. The average temperature, 50.5°, was the lowest of State record, except for 1917, and the average precipitation, 47.84 inches, was exceeded in only two of the other 33 years of record. The snowfall, however, was only slightly above the average.

Every month averaged cool, except August and November, and the averages for those months were only slightly above the normals. The departures were greatest for January, March, May, and September.

Until October the precipitation was deficient in only April and July, and the deficiencies for those months were unimportant. October was the driest month of State record, and the precipitation was also considerably deficient in November and December.

Owing to an exceptionally cool May the early season of growth was decidedly unfavorable. The cool and wet weather in September was also unfavorable for late growth and harvesting. The season of growth extended from about May 5 to October 22, being slightly longer than usual.

The average cloudiness was near the normal. The sunshine for Parkersburg averaged 50 per cent of the possible amount, or 3 per cent above the average. The average at Elkins was 45 per cent, or normal.

The wind movement at Parkersburg was 47,505 miles and at Elkins 47,227 miles.

THE WEATHER BY MONTHS

JANUARY.—January was moderately warm, with heavy rainfall. The snowfall, however, was the lightest of January State record, except in 1896. Slight to moderate floods occurred early in the month. The rivers in the eastern panhandle counties were also high on the 17th. The conditions were unfavorable for winter grains.

FEBRUARY.—February was characterized by nearly continuously cold weather after the 5th and by frequent and well distributed rains. Sleet or glaze storms occurred in many localities on the 17th and 19-20th, causing some damage to fruit trees and telegraph and telephone wires. Heavy rain on the 19-20th caused marked rises in the rivers. The conditions were unfavorable for winter grains.

MARCH.—March was considerably colder than usual, the mid-day temperatures being generally especially low. The snowfall was nearly twice the average. Excessive rain during the last decade caused floods over the northern counties. Fruit buds were dormant at the close of the month.

APRIL.—April was somewhat cooler and drier than usual. Frequent showers in nost of the agricultural districts delayed plowing and seeding. Moderately heavy now for the season fell on the 1st. At the close of the month wheat was in poor condiion, having been badly winter-killed.

Continued on page 51

THE WEATHER BY MONTHS

Continued from page 49

MAY.—The weather for May was remarkable. For only one May of record was the average temperature lower and the rainfall was the greatest of any May. Floods occurred in the northern and central counties and in the Ohio River to below Point Pleasant. Owing to flooding, many fields had to be replowed and some replanted. Farm work was nearly at a standstill and germination and growth were much retarded.

JUNE.—June was characterized by scattered heavy rains and a long period of cool weather. Excessive rain on the 8-9th caused marked floods in McDowell and Mercer counties. The flood in the Elkhorn Valley was comparable with that of 1901. Heavy rain over the northern portion of the State also caused floods in the smaller streams. Considerable damage was caused to crops on low bottoms.

JULY.—July was exceptionally cool. The temperature was above 90 degrees at only six stations, and the lowest readings ranged generally from 42 degrees to 47 degrees. At the close of the month corn was about two weeks late. A moderate hail storm, causing some damage, passed eastward over Harrison County from Bridgeport to Wilsonburg.

AUGUST.—The August rainfall occurred mostly during thunderstorms and was unfavorably distributed. A heavy shower during the night of the 24-25th along the border of Harrison and Lewis counties washed several bridges from their foundations and caused much damage to crops. Crops and farm work were from two to three weeks late at the close of the month.

SEPTEMBER.—September was exceptionally wet and cool, being the wettest September of record and the coolest September, except one. Low temperature on the morning of the 6th caused much damage to corn in the mountain regions. Practically half of the month's rainfall occurred on the last three days, causing floods in the smaller streams and high stages in the rivers for the season, damaging and destroying much corn.

OCTOBER.—October was the driest month of State record. Owing to the lateness of the season and the heavy rain at the close of September, the drought caused but slight damage. There is no record of a pleasanter month.

NOVEMBER.—The first half of November was fair, warm and dry, but the last half was cloudy and cold, with frequent rains and snows. The snowfall averaged nearly twice the normal.

DECEMBER.—December was mostly moderately warm during the first and second decades but was unusually cold during the last decade. The precipitation was below the normal, the snowfall being exceptionally light. The rivers were low.

Monthly and Annual Precipitation for the Year 1924, with Departures from Normal

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXIII Parkersburg, W. Va., January, 1925 No. 1

GENERAL SUMMARY

While the temperature averaged more than 1° below the normal, there was but one cold day until the 27th, although the temperature was slightly below the normal on three or four other days. The 23d was a moderately cold day. Exceptionally cold weather prevailed on the 27th and 28th, the coldest weather for the State since 1918. The 29th and 30th were also moderately cold days, but the month closed with the temperature practically normal.

The precipitation was also slightly deficient but quite favorably distributed, although the amounts received over the eastern panhandle counties were generally somewhat in excess. The greater part of the precipitation in the mountain counties fell as snow, the snowfall for the State being the heaviest for any month since January, 1918.

The conditions were generally favorable for winter grains, even during the cold period, when there was a good snow-cover. The weather was also generally favorable for outdoor work.

TEMPERATURE

The monthly mean for the State, determined from the records of 54 stations, was 31.1°. The departure from the normal for 43 stations having ten or more years of record was −1.2°. The emperature was above the normal from the 1st to the 8th, 16th o the 22d and on the 25-26th, the highest readings occurring enerally on the 7th and 25th. On the morning of the 28th the emperature ranged from near zero over the southern counties to rom 5° to 27° below zero in the northern counties. Cold eather also continued until the last day of the month.

PRECIPITATION

The average precipitation for the State, determined from the cords of 85 stations, was 3.81 inches. The departure from the ormal for 48 stations having ten or more years of record was -0.27 inch. Precipitation was quite general on the 1st-3d, h, 10-13th, 16-17th, 19-20th and 26 30th, the greatest amounts ing received on the 17th, 20th, 27th and 29th. In the more evated localities the precipitation was mostly snow on the 1st- and snow and rain on the 10-13th and 19-20th. The prepitation was all snow on the 26-30th, when the amounts nged generally from about 5 inches to more than 20 inches. e snowfall was heaviest over the eastern panhandle counties.

MISCELLANEOUS PHENOMENA

Fogs, dense: Bruceton Mills, 16th; Pickens, 3d and 20th; ilippi, 17th; Wellsburg, 16th; Terra Alta, 3d; Wheeling, h, 15th, 24th, 28th and 31st.

Sleet: Bayard, 3d; Lost Creek, 8th; Arbovale, Beckley, Marlinton, and Terra Alta, 10th; Cairo, Elkins, Horton, Martinsburg, and Parkersburg, 11th; Elkins, Fairmont, Horton, Marlinton, and Terra Alta, 12th; Lost Creek and Terra Alta, 13th; Arbovale, Bayard, and Piedmont, 16th; Arbovale, Bructon Mills, Elkins, Horton, Mannington, Marlinton, Moundsville, Smithfield, Terra Alta, and Union, 19th; Bayard, Brandywine, Horton, Fairmont, Martinsburg, Moundsville, Morgantown, Piedmont, Smithfield, Terra Alta, and Wheeling, 20th; Cairo and Parkersburg, 21st; Crawford, Elkins, Horton, Marlinton, and Union, 27th; Brownsville, 28th; Benson, Clarksburg, Crawford, Elkins, Fairmont, Horton, Lost Creek, Marlinton, Smithfield, and Terra Alta, 29th.

MAR 3 1925

A solar eclipse was observed generally throughout the state on the morning of the 24th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used i determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, a, b, c appearing in the table indicate number of missing days; for example, b represents two days, etc.

Daily Precipitation for January, 1926

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXIII PARKERSBURG, W. VA., FEBRUARY, 1925 No. 2

GENERAL SUMMARY

The past month was the warmest February of State record, except in 1909, when the February average was 40.4°, or .6° higher than for the month under consideration. The temperature fell to zero at only one station. The highest temperatures were well within previous records. The precipitation was considerably below the normal and was well distributed, the monthly amounts being below the normal at all stations, except six in the southern counties. The average snowfall, 2.0 inches, was the least of February State record. The rivers were only at moderate stages. The conditions were generally favorable for winter grains and outdoor work. Stock was in good condition at the close of the month.

TEMPERATURE

The monthly mean for the State, determined from the records of 53 stations, was 39.8°. The departure from the normal for 41 stations having ten or more years of record was + 7.8°. The temperature was above the normal daily, except the 3-4th, 12-14th and 26-28th, the warmest weather prevailing from the 6th to the 11th and the 20th to the 25th, when the temperature averaged generally from 10° to 20° above the normal. The lowest readings occurred at practically all stations on the 28th.

PRECIPITATION

The average precipitation for the State, determined from the records of 85 stations, was 2.49 inches. The departure from the normal for 47 stations having ten or more years of record was −0.66 inch. Precipitation occurred in practically all regions on the 1st-2d, 9th, 11-12th, 14-15th, 22d-24th, and 26th, the greatest amounts being measured on the 11-12th, 15th, 24th, and 26th. Light snow or snow flurries occurred at many stations on the 2d, 11-12th and 26th.

HAIL

Light hail fell in sections of Kanawha County on the 15th and in sections of Lewis and Upshur Counties on the 23d.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 16th; Bancroft, 16th and 18th; Bayard, 17th; Bens Run, 11th; Bruceton Mills, 2d and 16th; Charleston, 18th; Davis, 9th, 17th, and 24th; Elkins, 6th, 10th, 16th, 20th, and 25th; Glenville, 16th; Huntington, 16th and 20th; Lewisburg, 10th; Marlinton, 4th, 5th, 6th, 8th, 10th, 16th, 17th, 20th, and 25th; Morgantown, 15th and 16th; Parkersburg, 6th and 16th; Pickens, 2d, 17th, and 24th; Romney, 16th; Smithfield, 7th and 16th; Spencer, 16th.

Halo, lunar: Elkins, 7th.

Halo, solar: Parkersburg and Ryan, 28th.

Thunderstorms (dates and number of stations reporting): 11th, 4; 15th, 4; 23d, 17; 24th, 4.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXIII PARKERSBURG, W. VA., MARCH, 1925 No. 3

GENERAL SUMMARY

March was an exceptionally pleasant month for the season. The temperature averaged nearly 1° above the normal and the month was nearly continuously moderately warm, except the first four and last four days. The 3d was a cold day. The precipitation averaged slightly more than three-fourths of an inch below the normal and was favorably distributed throughout the month and over the State. The rivers were at low or moderate stages. The low temperature on the 3d caused considerable damage to peach trees. In the agricultural districts the ground was bare nearly the entire month, making the conditions somewhat unfavorable for winter grains.

TEMPERATURE

The monthly mean for the State, determined from the readings of 51 stations, was 43.6°. The departure from the normal for 40 stations having ten or more years of record was + 0.9°. The month opened cold and the temperature continued below the normal until the 5th. The lowest temperature of the month, ranging generally from near zero to about 8° above zero occurred on the morning of the 3d. In some of the mountain districts, however, the readings were about 10° below zero. The temperature was above the normal from the 6th to the 28th, except the 15-16th, 20th, and 22-23d, when the averages were slightly below. The highest temperatures occurred on the 10th and 26th. The readings for the last four days averaged about 10° below the normal.

PRECIPITATION

The average precipitation for the State, determined from 85 stations, was 3.25 inches. The departure from the normal for 47 stations having ten or more years of record was —0.77 inch. The precipitation was heaviest over the northern portion of the State and lightest over the eastern counties. Precipitation was quite general on the 1st-2d, 11-14th, 17-19th, and 27-28th. Light snow or snow flurries occurred in nearly all localities on the 1st-2d and 28-29th. In the more elevated sections there was also light snow at several stations on the 13th, 15th, and 20th.

HAIL

Light hail fell in sections of Randolph County on the 18th and in sections of Mingo County on the 26th. No damage resulted.

MISCELLANEOUS PHENOMENA

Fogs, dense: Bruceton Mills, 30th; Charleston, 6th; Elkins, 7th, 18th, and 21st; Horton, 30th; Marlinton, 8th, 9th, 14th, and 26th; Morgantown, 17th; Moundsville, 18th; New Cumber-nd, 18th; Pickens, 5th and 30th; Smithfield, 18th; Wheel-g, 6th, 8th, 18th, 24th, and 26th.

Halo, lunar: Parkersburg, 4th.

Halos, solar: Ryan, 16th and 21st.

Smoke, light: Lost Creek, 8th, 9th, and 10th; Mannington, 9th, 10th, and 26th; Pickens, 8th.

Sleet: Bayard and Wheeling, 13th; Evenwood, 18th; Horton, 15th; Martinsburg, Piedmont, and Terra Alta, 1st; Moundsville, 28th; Parkersburg, 27th.

Thunderstorms (dates and number of stations reporting): 11th, 8: 12th, 5; 13th, 4; 14th, 2; 17th, 1; 18th, 20; 19th, 15; 25th, 1; 26th, 8; 28th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, a, b, c appearing in the table indicate number of missingdays ; for example, b represents two days, etc.

Except as otherwise indicated observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at the time of observation.

*** Regular Weather Bureau station; precipitation is for 24-hour period, midnight to midnight.

||| Precipitation measured in the morning: amount then recorded is for the preceding 24 hours. * Precipitation included in the next following measurement.

T. Trace, or less than 0.01 inch.

+++ Probably incomplete.
